1 Introduction

1.1 Context

This Transport Assessment (TA) has been prepared by Ove Arup and Partners Ltd ('Arup') and accompanies an application for outline planning permission for a new 140-bed hotel, located on land to the west of Nicklaus Avenue, Machynys, Llanelli, Carmarthenshire. The application is submitted to Camarthenshire County Council (CCC) on behalf of the Applicant, Camarthenshire County Council.

The proposed development is described as follows:

“140-bed hotel with associated car parking, access roads, landscape and infrastructure works, including the importation of material for infilling of land to raise level for the development.”

Previous relevant planning applications submitted within the Machynys area include:

- TA for the full planning application of the Llanelli Wellness and Life Sciences Village (LWLV) located north of the Delta Lakes Roundabout and proposed hotel site. The proposal was granted outline planning consent in June 2019 (application ref: S/36948);
- Transport Statement (TS) for the Machynys Central Residential Development (35 residential units) located to the west of the proposed hotel site. The proposal is being prepared by Arup and still under review. The application will be submitted in 2021; and
- A previous TA for the proposed Machynys hotel development (125 beds) prepared by Waterman Civils which was granted full planning permission in 2010 (application ref: S/22367) but no subsequent application has been submitted to extend the permission and therefore this expired in March 2015.

This TA provides an update on the previous TA prepared by Waterman (as detailed above) in support of the development of a 140-bed hotel. The TA considers the transport implications of the proposed hotel development on the surrounding area and provides detail of measures which can be taken to encourage the uptake of sustainable transport by future visitors, employees, and deliveries associated with the proposal.

Whilst all matters are reserved, it is assumed the proposed hotel development will include the following for the purposes of this TA:

- 140 hotel rooms over up to four floors;
- office/conferencing facilities;
- a hotel restaurant/bar;
- Landscaped grounds;
- visitors and employee car park and;
- a pond/new reed for rainwater attenuation.

Note that all proposals apart including access are reserved matters and therefore details within this TA are indicative and subject to change within the parameters approved under the outline planning application.

1.2 Scoping

The content of the previous TA prepared by Waterman in 2008 was informed by a scoping exercise agreed by Carmarthenshire County Council (CCC).

In light of the intervening period this scoping exercise has been repeated to ensure that CCC agree the approach to assessment. Following discussion with CCC Highways and Transport Division it was agreed that an updated outline TA would be appropriate for a development of this scale making use of background knowledge from recent planning applications and associated TAs for neighbouring developments. Scoping correspondence (via e-mail and a videoconference) with CCC Highways is included as Appendix A.

1.3 Report Structure

This report is structured as follows:

- Chapter 2 sets out the transport and planning policy framework;
- Chapter 3 describes the site location and existing transport network;
- Chapter 4 outlines the development proposals;
- Chapter 5 presents the projected travel demand from the Machynys Hotel development;
- Chapter 6 presents the Transport Implementation Strategy (TIS);
- Chapter 7 assesses the impact on surrounding junctions against the TIS;
- Chapter 8 identifies the potential impacts of construction traffic on the surrounding area;
- Chapter 9 presents the Framework Travel Plan; and
- Chapter 10 summarises key conclusions of the Transport Assessment.

2 Legislation and Policy Context

2.1 National Policy

2.1.1 Taking Wales Forward 2016-2021

Taking Wales Forward is the current Programme for Government and sets out how the Welsh Government will deliver more and better jobs through a stronger, fairer economy, improve and reform its public services to build a united, connected and sustainable Wales.

It emphasises that the UK withdrawal from the European Union creates some uncertainty and challenges, but the Welsh Government's mandate is clear: The Welsh Government's relentless focus will be on driving improvement in the economy and public services. To create a prosperous and secure Wales, Welsh Government will support rural transport, and invest in transport to ensure that people can travel easily to jobs.

2.1.2 Planning Policy Wales: Edition 10 (December 2018)

Planning Policy Wales (PPW) sets out the land use planning policies of the Welsh Government. It is supplemented by a series of Technical Advice Notes (TANs). The primary objective of PPW is to ensure that the planning system contributes towards the delivery of sustainable development and improves the social, economic, environmental and cultural well-being of Wales.

Chapter 2 (People and Places: Achieving Well-being through Placemaking) indicates all development decisions should contribute towards the making of Sustainable Places and improved well-being. Five Key Principles are presented in PPW which should be embraced to ensure planning facilitates the right development in the right place. These are listed below alongside a summary of how the project is considered to positively contribute to these goals:

- *Growing our economy in a sustainable manner* – development should contribute to long-term economic well-being, making the best use of existing infrastructure and planning for new supporting infrastructure and services;
- *Making best use of resources* – using resources efficiently, development should be resilient to climate change and contribute towards decarbonising society;
- *Facilitating accessible and healthy environments* – development should support healthy lives, providing high-quality places that are barrier-free and inclusive to all members of society;
- *Creating and sustaining communities* – places should have the right mix of good homes, job, services, infrastructure and facilities, creating urban and rural communities where people want to be and interact with others; and

- *Maximising environmental protection and limiting environmental impact* – natural, historic and cultural assets should be protected and enhanced whilst negative environmental impacts should be avoided in the wider public interest.

Chapter 3 (Strategic and Spatial Choices) identifies five key aspects of good design, as summarised in Figure 1. It states good design is inclusive design, placing people at the heart of the design process. It must reduce inequality of access to essential services, education and employment and design measures with design measures improving accessibility by walking, cycling and public transport.

Figure 1: Five Aspects of Good Design (PPW 10)

It is also noted that good design should avoid the creation of car-based developments by maximising opportunities for people to make sustainable and healthy travel choices for their daily journeys. To maximise accessibility by sustainable non-car modes, infrastructure proposed within the site should be integrated with existing infrastructure such as the strategic cycling network.

Chapter 4 (Active and Social Places) discusses the *well-connected cohesive communities' components of placemaking*, covering transport, housing retail and commercial development including hotels, community facilities and recreational spaces. With regards to transport, it states people should have access to jobs and services through more efficient and sustainable journeys, by walking, cycling and public transport.

It is also noted land use and transport planning should be integrated, including:

- Within and between different types of transport;
- Between transport measures and land use planning;
- Between transport measures and policies to protect and improve the environment; and

- Between transport measures and policies for education, health, social inclusion and wealth creation.

The sustainable transport hierarchy presented in Figure 2, which prioritises walking, cycling and public transport ahead of the private motor vehicles, should be used to:

- Reduce the need to travel;
- Prevent car-dependent developments in unsustainable locations; and
- Support the delivery of schemes located, designed and supported by infrastructure which prioritises access and movement by active and sustainable transport.

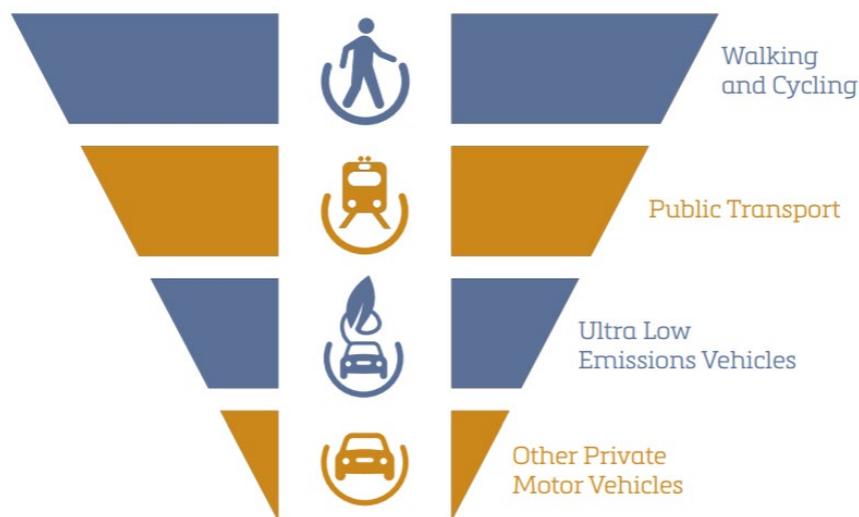

Figure 2: Sustainable Transport Hierarchy (PPW Edition 10)

Chapter 5 (Productive and Enterprising Places) considers the economic theme of place-making. It states *the provision of sustainable transport infrastructure is essential in order to build prosperity, tackle climate change, reduce airborne pollution and to improve the social, economic, environmental and cultural well-being of Wales.*

2.1.3 Active Travel Act (2013) and Interactive Mapping

The Active Travel (Wales) Act 2013 makes it a legal requirement for Local Authorities in Wales to map and plan for suitable routes for Active Travel and to build and improve their infrastructure for walking and cycling every year. It creates new duties for highways authorities to consider the needs of walkers and cyclists and make better provision for them. It also requires both the Welsh Government and local authorities to promote walking and cycling as a mode of transport so that local communities rely less on cars when making short journeys.

In the context of transport schemes and improvements, there is significant opportunity to reconfigure existing infrastructure so that it better meets the needs of existing and new settlements and facilitates active travel. For example, bypass

road schemes can address settlement severance and in doing so provide opportunities for active travel because pedestrians and cyclists would no longer need to compete with significant volumes of vehicular traffic for short journeys in the locality.

2.1.4 Technical Advice Note 18: Transport

The Advice Note elaborates on the relationship between land use planning and transport infrastructure by outlining a range of key principles that should be adopted in new development. These include:

- Ensuring new development is located where there is, or will be, good access by public transport, walking and cycling, thereby minimising the need for travel and fostering social inclusion;
- Managing parking provision;
- Ensuring that new development and major alterations to existing developments include appropriate provision for pedestrians (including those with special access and mobility requirements), cycling, public transport, and traffic management and parking/servicing;
- Encouraging the location of development near other related uses to encourage multi-purpose trips; and
- Promoting cycling and walking and supporting the provision of high quality, inclusive public transport.

2.1.5 Wales Spatial Plan (2008)

The 2008 update to the Wales Spatial Plan (WSP) sets out the planning agenda at a spatial level. There are five guiding themes which underpin the national vision:

- Building sustainable communities;
- Promoting a sustainable economy;
- Valuing our environment;
- Achieving sustainable accessibility; and
- Respecting distinctiveness.

Machynys falls within the ‘Swansea Bay – Waterfront and Western Valleys’ region of South Wales.

2.1.6 The Well-being of Future Generations (Wales) Act 2015

The Well-being of Future Generations (Wales) Act (2015) requires public bodies in Wales to consider the long-term impacts of decision making and improve working with local communities to prevent persistent problems in Wales such as poverty, health inequalities and climate change. Seven well-being goals have been identified within the Act to ensure public bodies are working towards the same goals:

- **A prosperous Wales** that has an innovative, productive and low carbon society which recognises the limits of the global environment and therefore uses resources efficiently and proportionately;
- **A resilient Wales** that maintains and enhances a biodiverse natural environment which has the capacity to adapt to change;
- **A healthier Wales** in which people's physical and mental well-being is maximised and in which choices and behaviours that benefit future health are understood;
- **A more equal Wales** where people can achieve their full potential regardless of their background or circumstances;
- **A Wales of cohesive communities** which are attractive, viable, safe and well-connected;
- **A Wales of vibrant culture and Welsh language;** and
- **A globally responsible Wales** which, when doing anything to improve the economic, social, environmental and cultural well-being of Wales, takes account of whether doing such a thing may make a positive contribution to global well-being.

2.1.7 **Wales Transport Strategy: One Wales – Connecting the Nation (April 2008)**

In informing the strategic priorities of the National Transport Plan (NTP), the Wales Transport Strategy identifies a range of outcomes that should be achieved over the longer term. These include the need for improved connectivity and reliability across networks. The following key principles are identified as critical to the future transport policy agenda:

- achieving a more effective and efficient transport system;
- achieving greater use of the more sustainable and healthy forms of travel;
- minimising demands on the transport system; and
- reducing the impact of transport on greenhouse gas emissions.

2.1.8 **National Transport Plan (July 2009)**

The NTP provides a basis for taking forward the delivery of the integrated transport strategy proposed with the Wales Transport Strategy. The NTP includes several aims that are intended to maximise the benefits associated with improving transport. Those relevant to the east-west corridor in south Wales include the following:

- to improve the reliability, quality and frequency of east-west rail; and
- to improve reliability, journey time and safety along the east-west road corridor.

2.1.9 **Welcome to Wales 2020 - 2025**

Welcome to Wales is the current plan which outlines the vision for the future tourism economy and the priorities for Visit Wales. Visit Wales is the team within

Welsh Government that is responsible for the development and promotion of the visitor economy in Wales. The ambition is to delight visitors and locals in equal measures, improving the quality of the visitor experience across Wales in a way that also benefits the local people.

The development of iconic products must align directly with a purposeful place-making approach which provide the attractions, facilities and basic infrastructure that visitors look for. Visit Wales will lead on driving forward integrated place-making programmes in destinations where tourism is either the main or a key economic sector.

This will be achieved by investing in tourism products and events that deliver wider social, environmental, cultural and health benefits. Figure 3 below, shows the four key priorities for Visit Wales to deliver this plan.

Figure 3: Visit Wales key priorities and actions in the Welcome to Wales plan

Visit Wales recognise that visitors also need good transport connections, vibrant destinations that are open for business and well managed natural and cultural resources. Therefore, infrastructure and transport are major factors affecting the future of tourism in Wales. Visit Wales will work with transport bodies and stakeholders to ensure major infrastructure programmes are delivered with tourism front in mind.

The *Low Carbon Action Plan* looks to reduce the transport sector of emissions by encouraging the use of public transport and active travel. Visit Wales recognise that international flights are still an issue in meeting the 2030 low carbon targets but note that international visitors make an important long-term contribution to jobs and spend in Wales, and therefore will investigate new approaches to carbon offsetting, that benefits Wales.

2.2 Regional Policy

2.2.1 Joint transport plan for South West Wales (2015-2020)

The joint Transport Plan for South West Wales (JTP) is between four local authorities comprising of Carmarthenshire, Neath Port Talbot, Swansea and Pembrokeshire. The Plan influences transport policy in the region for the period 2015-2020 and beyond.

The vision of the JTP is to improve transport and access within and beyond the region to facilitate economic regeneration, reduce deprivation and support the development and use of more sustainable and healthier mode of transport.

Carmarthenshire County Council Schemes (2015-2020) include the Llanelli Integrated Transport Interchange scheme. The Station Road/Copperworks Road areas of Llanelli are a key focal point for transport interchange between a number of modes including the railway station, key commercial bus routes and a park and ride (rail) facility. Unfortunately, this area has suffered in terms of accessibility and substandard facilities leading to a less than satisfactory transport offer. A number of studies have been undertaken investigating potential solutions to the issues of interchange, accessibility, safety and security; this scheme would take forward the recommendations arising from these pieces of work.

The JTP also look at medium- and long-term programmes (2020-2030). Schemes which could impact the Machynys hotel site are listed below;

- Llanelli Park and Ride: This is the development of a Park & Ride facility to promote sustainable transport at site to be determined;
- South Llanelli JV - Transport Infrastructure: Implementing mitigation measures at potential Air Quality Management Areas derived from traffic congestion;
- Transport Masterplans - Llanelli, Carmarthen and Ammanford: The three main urban centres in Carmarthenshire are currently the subject of economic development and regeneration studies in line with the Swansea Bay Economic Regeneration Strategy, the outcomes of this work will inevitably include requirements to improve the transport offer to from in and around the centres; and
- Dualling the A4138: This is a longer-term aspiration for the stretch of highway linking the M4 to the important regional urban centre of Llanelli.

2.3 Local Policy

2.3.1 Local Development Plan 2014 (Adopted)

The development plan for the area is the Carmarthenshire County Council's (CCC) Local Development Plan (LDP), adopted in 2014 for the period 2006-2021. The plan supports sustainable development, encouraging an integrated and sustainable transport system.

Section 6.5 of the LDP relates to Transport and Accessibility and includes four policies relevant to the proposed development:

Policy TR1 Primary and Core Road Networks: proposals which do not restrict traffic movement and/or compromise the safety of the primary road network and core network will, where appropriate be supported.

Policy TR2 Location of Development – Transport Considerations: proposals which have a potential for significant trip generation will be permitted where:

- It is in a manner consistent with the plans strategic objectives, its settlement framework and its policies and proposals;
- It is accessible to non-car modes of transport including public transport, cycling and walking;
- Provision is made for the non-car modes of transport and for those with mobility difficulties in the design of the proposal and the provision of onsite facilities; and
- Travel Plans have been considered and where appropriate incorporated.

Policy TR3 Highways in Developments - Design Considerations: the design and layout of all development proposals will, where appropriate, be required to include:

- An integrated network of convenient and safe pedestrian and cycle routes (within and from the site) which promotes the interests of pedestrians, cyclists and public transport;
- Suitable provision for access by public transport;
- Appropriate parking and where applicable, servicing space in accordance with required standards;
- Infrastructure and spaces allowing safe and easy access for those with mobility difficulties;
- Required access standards reflective of the relevant class of road and speed restrictions including visibility splays and design features and calming measures necessary to ensure highway safety and the ease of movement is maintained, and where required enhanced;
- Provision for Sustainable Urban Drainage Systems to allow for the disposal of surface water runoff from the highway.

It also states that proposals which do not generate unacceptable levels of traffic on the surrounding road network and would not be detrimental to highway safety or cause significant harm to the amenity of residents will be permitted.

In addition to this, the policy refers to the fact that proposals which will not result in offsite congestion in terms of parking or service provision or where the capacity of the network is enough to serve the development will be permitted.

Policy TR4 Cycling and Walking: land required to facilitate the following improvements to the cycle network will be safeguarded. Proposed routes where

known are shown on the proposals map. The potential opportunity for horse riding should where appropriate be considered.

Developments should, where appropriate seek to incorporate, or where acceptable, facilitate links to the cycle, rights of way and bridleway network to ensure an integrated sustainable approach in respect of any site.

Section 6.10 of the adopted LDP relates to Tourism. The Tourism Vision for Carmarthenshire 2005-2015 outlines some key values that express the potential social and economic benefits of tourism related development. It also confirms the importance of conserving and enhancing the environment.

In terms of challenges, the vision states that the area's activity/wet weather and natural environment potential is unfulfilled. The challenges for the sector include facilitating diversity and augmenting the quality and variety of accommodation and enhancing the County's "all year round" destination offer.

Tourism has a spatial dimension within Carmarthenshire, with the post-industrial coastal area (including access to the All Wales Coastal Path) being home to large scale regional attractions such as the Millennium Coastal Park and further inland, Ffos Las Racecourse and the northern rural areas such as the Brechfa Forest renowned for outdoor activity offers such as mountain biking. The merits of tourism related proposals should therefore be considered in the context of the County's rich and diverse attractions.

Clear national guidance in respect of this topic is contained within PPW: Edition 7: Tourism, Sport and Recreation and TAN13: - Tourism, TAN6: Agriculture and Rural Development, TAN16: Sport, Recreation and Open Space. Consequently, the following matters do not require LDP policies as they are adequately covered by the aforementioned national guidance:

- Farm Diversification and re use/adaptation of rural buildings (see also policies H5 and EMP4);
- Off road recreation;
- Golf Courses; and
- Leisure facilities being incorporated into tourism development.

2.3.2 Local Development Plan 2018-2033 (Deposit)

The Revised LDP 2018 – 2033 will replace the current adopted Plan which is currently scheduled for adoption in December 2021.

Strategic Policy SP 17 relates to Transport and Accessibility. This states that sustainable and deliverable development requires an integrated, accessible, reliable, efficient, safe and sustainable transport network to underpin delivery. The Plan therefore contributes to the delivery of a sustainable transport system and associated infrastructure through:

1. Reducing the need to travel, particularly by private motor car;

2. Addressing social inclusion through increased accessibility to employment, services and facilities;
3. Supporting and, where applicable, enhancing alternatives to the motor car, such as public transport (including park and ride facilities and encouraging the adoption of travel plans) and active travel through cycling and walking;
4. Re-enforcing the function and role of settlements in accordance with the settlement framework;
5. Promoting the efficient use of the transport network;
6. Enhancing accessibility to places of employment, homes, services, facilities and other significant trip generating proposals at locations with access to appropriate transport infrastructure;
7. The incorporation of design and access solutions within developments to promote accessibility;
8. Providing walking and cycling routes, linking in with active travel and green infrastructure networks;
9. Providing for new technological solutions through Ultra Low Emission Vehicles Charging Points in new developments; and
10. Adopting a sustainable approach to the design, function and layout of new development, including providing appropriate levels of parking.

2.3.3 South Llanelli Planning and Development Brief 2014

The Supplementary Planning Guidance (SPG) South Llanelli Planning and Development Brief includes further guidance and elaborates on the proposals and policies of the CCC LDP to provide additional clarity to assist developers understanding the core requirements for the area.

The South Llanelli Strategic Zone is comprised of the following sites which are expected to contribute to the regeneration aspirations of South Llanelli: Delta Lakes; Machynys; The Avenue; North Dock and Old Castle Works.

The Brief indicates that south Llanelli is well serviced by strategic and sustainable transport links however specific/localised capacity issues may need to be evaluated.

2.4 Summary

The chapter has set out the policy context against which this TA should be considered. Key policy documents have been found to be relevant to the proposed development are likely to influence the way people access the site in future. The main points and relevance are:

- The site must plan for successful transport by public transport, walking and cycling and prioritise design for these modes over the needs of the private car;

- The development should encourage the use of ULEVs and the provision of charging points;
- The development should look to connect with the All Wales Coastal Path;
- The development should look to improve the experience of Llanelli for visitors whilst also benefitting local people; and
- The TA should consider measures required for all modes to minimise and mitigate the effects of development.

3 Existing Conditions

3.1 Introduction

This section presents the findings of an audit that was undertaken to assess current movement patterns and the provision of existing transport networks serving the site.

3.2 Site Location

The Machynys hotel site is situated to the south of Llanelli town centre, adjacent to the Machynys Roundabout which serves the B4304, The Avenue and access to the golf course south of the site. The site boundary is depicted by the red line boundary shown in Figure 4. The blue line boundary represents the proposed Machynys Residential Development.

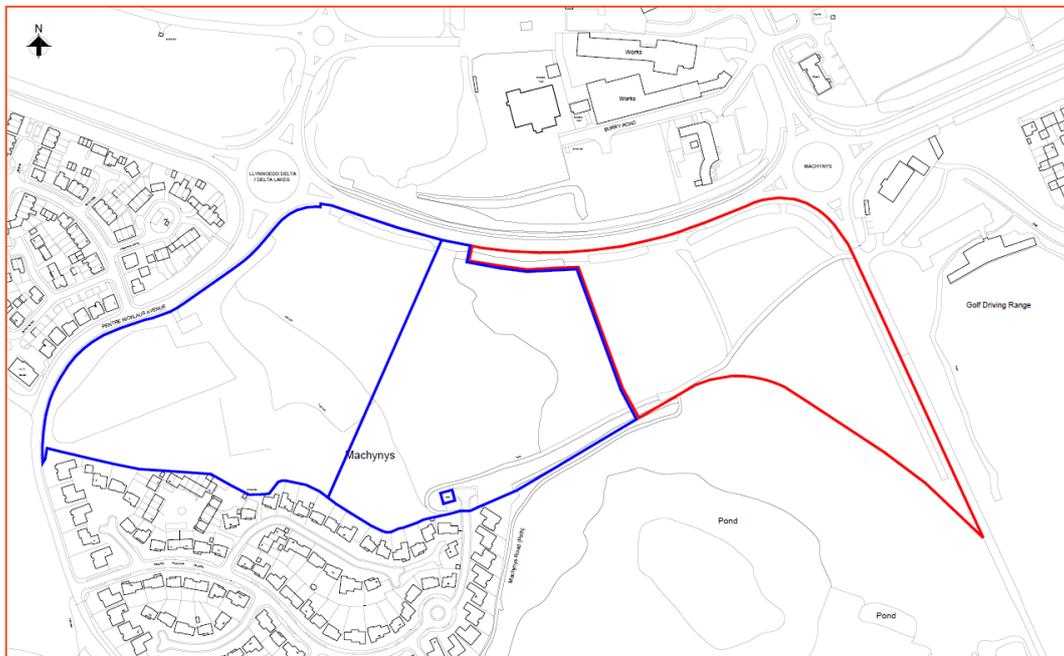

Figure 4: Site Location

The site is located approximately 2km to the south of Llanelli town centre on the edge of the existing built-up area and adjacent to the B4304 Coastal Road. There is no existing access to the site area.

3.3 Existing and surrounding Land uses

The hotel site is currently an area of open land consisting of rough grass and scrubland. The site is generally flat with some localised raised areas of ground close to the B4304 and located between the Delta Lakes roundabout.

Surrounding the site are several recently constructed or planned development sites. The Machynys South residential site phases 1 and 2 (415 units) lies south west of the hotel site and is accessed via the Delta Lakes roundabout.

Close to the site is the Machynys West residential development accessed from the Delta Lakes roundabout consists of 205 residential units.

The area of land between the B4304 and The Avenue, known as Delta Lakes, is proposed to be developed as a health-led mixed-use development named the Llanelli Wellness and Life sciences Village (LWLV). The proposals have been granted outline planning consent and it is understood that a reserved matters application is being prepared for Phase 1. As part of this scheme, improvements are proposed to the local transport network including footways, cycleways, bus stop and service improvements and highway mitigation.

3.4 Active Travel

The site is bounded to the north by the B4304 Coastal Road. To the north of this road there is an existing shared cycleway/footway which runs parallel to the road to the east and west and is approximately 2.8m wide. At the nearby Delta Lakes and Machynys roundabouts to the east and west respectively there are uncontrolled pedestrian crossings with dropped kerbs and tactile paving. There are no pedestrian or cycle facilities on the southern side of the road; this is also the case for significant lengths of the Coastal Road. In the wider area most roads do not have specific cycle facilities.

The footway/cycleway adjacent to the Coastal Road connects into the wider pedestrian network. Pedestrians in Llanelli are generally well provided for both by footways adjacent to roads and public footpaths. There has been a programme of improvements throughout Llanelli to provide dropped kerbs and appropriate tactile pavement facilities at pedestrian crossing points to ensure accessibility for the disabled and mobility impaired.

Improvements to the existing pedestrian and cycle network are proposed as part of the LWLV development, including the following:

- High quality pedestrian and cycle routes through the site;
- Footway provision on the north and east side of the B4304 Coastal Link road;
- Signal-controlled crossings on the B4304 Coastal Link Road; and
- Contribution towards pedestrian and cycle improvements of Copperworks Road.

The CIHT guidance Providing for Journeys on Foot (2000) suggests for journeys to school and commutes to work, the preferred maximum walking distance is 2,000m equating to a 25-minute walk. Whereas other local facilities should be within 1,200m walking distance of a site which equates to a 15-minute walk.

Figure 5 presents the existing infrastructure for pedestrians and cyclists including several Public Right of Ways (PROWs) and cycle routes. The plan also illustrates local facilities within the vicinity of the development site including a public house/club/bars, parks and retail.

Figure 6 illustrates the walking accessibility of the Machynys site. Within ten minutes' walk of the site there are local shops and schools, the railway station is

located within 20 minutes' walk and the Llanelli town centre and Parc Trostre retail area within 30 minutes.

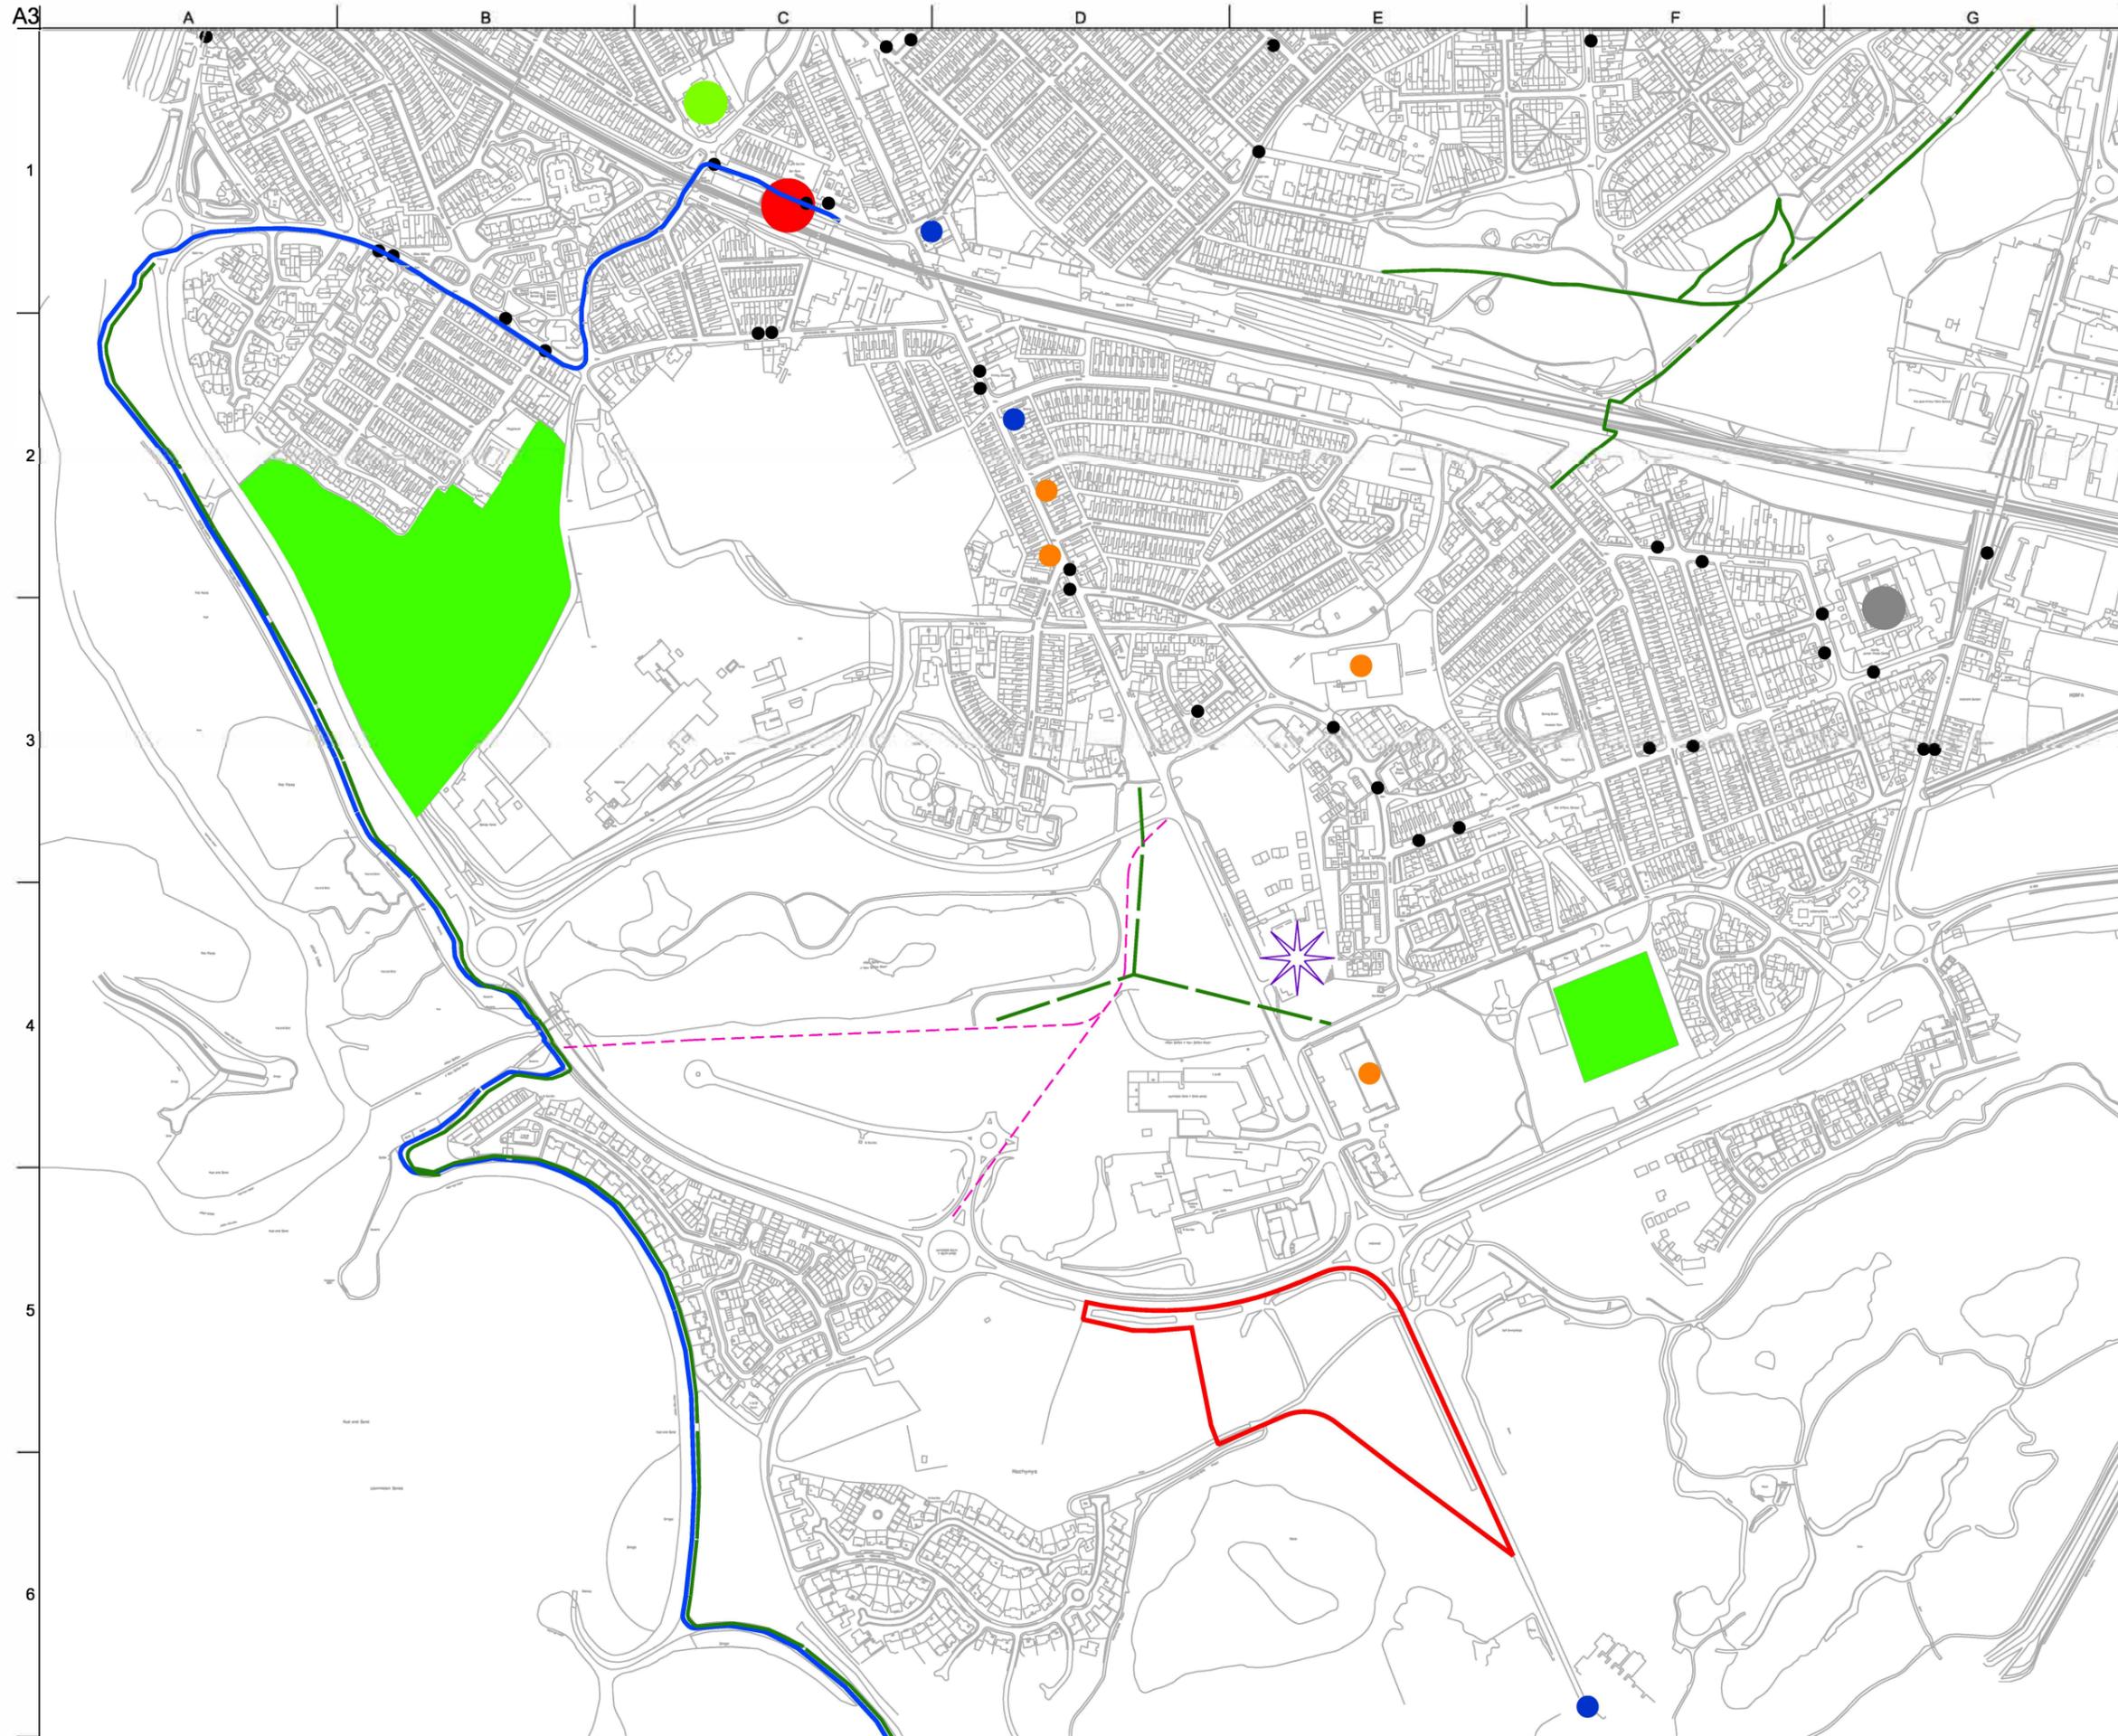

Figure 7 illustrates the cycling accessibility of the Machynys site. Within five minutes' cycle there are local shops and schools. Within 10 minutes cycle ride most of the town centre can be reached as well as the Trostre Retail Park. Within 15 minutes cycle a large proportion of the urban area can be reached. The topography and scale of Llanelli are well suited to cycling however at present levels of cycling in Llanelli are low, particularly cycling journeys made for utility purposes such as shopping or commuting to work.

Since the completion of the Millennium Coastal Path, as illustrated on Figure 5, Llanelli has become a destination for leisure cycling; the Millennium Coastal Path is a seven-kilometre section of the long distance National Cycle Network (NCN) Route 4, Celtic Trail West and is a traffic free route. Near Llanelli, the route runs along the coastline and provides links to Burry Port and Gowerton.

Photograph 1: Millennium Coastal Path (NCN Route 4)

The provision of cycle parking, a pre-requisite to encouraging utility cycling journeys, appears to be minimal around Llanelli. There is cycle parking at the Millennium Coastal Park Discovery Centre and covered stands at the railway station but elsewhere there are few facilities.

3.5 Public Transport

3.5.1 Bus

The closest bus stops to the site are located on both sides of New Street, approximately 700/750m from the centre of the site, as shown on Figure 5. The stop is extremely basic in nature and lacks facilities such as a flag, timetable information or shelter.

The bus stops are served by the circular L1 service, see Figure 8, which originates and terminates at Llanelli Bus Station via the Trostre Retail Park. The details of the route are set out in Table 1 below. The route operates in both a clockwise and anticlockwise rotation, combining to provide an hourly service to Llanelli Bus Station where interchange to other local and regional services is possible.

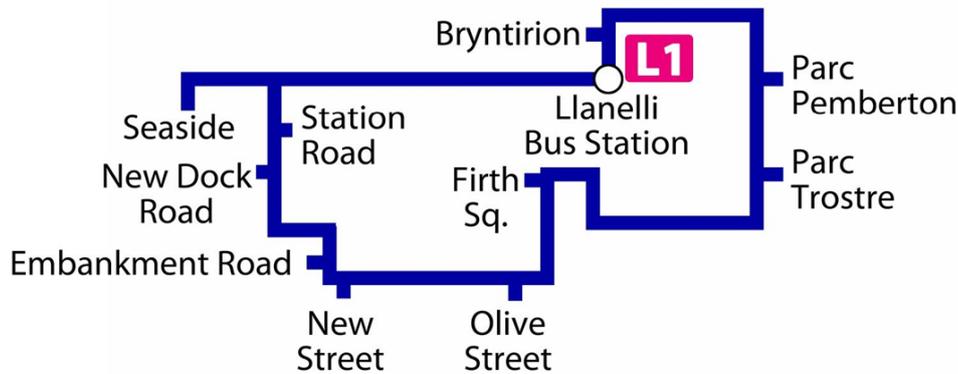

Figure 8: First Cymru L1 Bus Service Map

Table 1: Local Bus Service

Service	Route	Operator	Service Frequency daytime/evening (minutes)	
			Monday-Saturday	Sunday & Bank Holidays
L1	Llanelli – Penyfan - Morfa	First Cymru	120/-	No service

It is understood that there will be improvements to the local bus service provision as part of the LWLV proposals, including a bus stop within the Delta Lakes site and potential improvements/alterations to existing bus services.

3.5.2 Rail

Llanelli railway station is located some 1.5km north of the Machynys site. The railway station is served by the South Wales Mainline and is the southern end of the Heart of Wales Lines. The station building, located adjacent to the eastbound platform is staffed during weekdays (1000-1240) and Saturdays (0700-1330) and has facilities which include a waiting room/seating area, toilets, cycle storage, car parking and a taxi rank.

It is understood that Llanelli will be upgraded as part of Transport for Wales' Station Improvements Plan with work scheduled to begin in 2021. Whilst the detail of the work is yet to be confirmed, it is expected that this will include accessible toilets for all, improved or new shelters and additional seating, help points and CCTV.

Photograph 2: Llanelli Railway Station

Train services are operated by Transport for Wales. The services and approximate frequency of direct trains calling at Llanelli are summarised in Table 2.

Table 2: Direct Rail Services and Frequencies from Llanelli

Destination	Frequency			Operator
	Mon-Fri	Sat	Sun	
Milford Haven	120 mins	120 mins	7 a day	Transport for Wales
Pembroke	5 a day*	5 a day*	5 a day*	Transport for Wales
Carmarthen	60 mins	60 mins	60 mins	Transport for Wales
Swansea	60 mins	60 mins	60 mins	Transport for Wales
Cardiff	30-60 mins	30-60 mins	60 mins	Transport for Wales / Great Western Railway

*Some services require a change

The Plus Bus¹ scheme operates in Llanelli, funded as a partnership between public transport operators. PlusBus enables passengers to add connecting bus travel to their rail ticket at a reduced cost for bus services to and from the rail station and around the urban area thus encouraging integration between public transport modes. A Llanelli PlusBus ticket gives unlimited bus travel on participating operators' services around Llanelli. Daily PlusBus prices are as follows:

- Adult - £2.50;
- Child - £1.25; and
- Railcard holder - £1.65.

¹ <https://www.plusbus.info/llanelli>

There are two level crossings located directly east (Photograph 3) and west of Llanelli station. A pedestrian footbridge adjacent to Llanelli East level crossing to allow pedestrians to cross the railway.

Photograph 3: Llanelli East Level Crossing

The most direct route to Llanelli Railway Station from the site is via a combination of New Dock Road and Great Western Crescent.

3.6 Local Highway Network

Figure 9 shows the highway within the study area and junctions assessed, which are detailed in Sections 3.6.1.

The Machynys site is located adjacent to the B4304 Coastal Road which defines a southern edge to Llanelli and acts as a peripheral distributor connecting to the A484 to the east and west of Llanelli. The B4304 is a wide single carriageway road with a 40mph speed limit and at-grade roundabout junctions at regular intervals providing access to surrounding development. The Machynys roundabout is located around 180m to the east of the site whilst the Delta Lakes roundabout is located around 280m to the west. At present there is no access from the Coastal Road to the Machynys site. To the east the Coastal Road provides a route to the Parc Trostre retail area and the A4138 which is the route to M4 Junction 38. The Morfa to Berwick Link road provides a further link to the A484 and an alternative route to Swansea crossing the Loughor Estuary.

The Avenue and New Dock Road provide a direct route to Llanelli railway station and the continuation of this route, Station Road, provides access to the town centre. This route crosses the railway lines at a level crossing which is often subject to delay as a result of trains and the current practise of keeping the crossing gates down to allow more than one train to pass at a time.

Site visits indicate that highway conditions in Llanelli are generally good with congestion having a minimal impact on vehicle movements except for short periods in the AM and PM peak hours and more localised issues resulting from narrow streets, frontage activity and inconsiderate parking. On New Dock

Road/B4304 there is a barrier presented by the railway line and associated crossing.

3.6.1 Existing Traffic flows

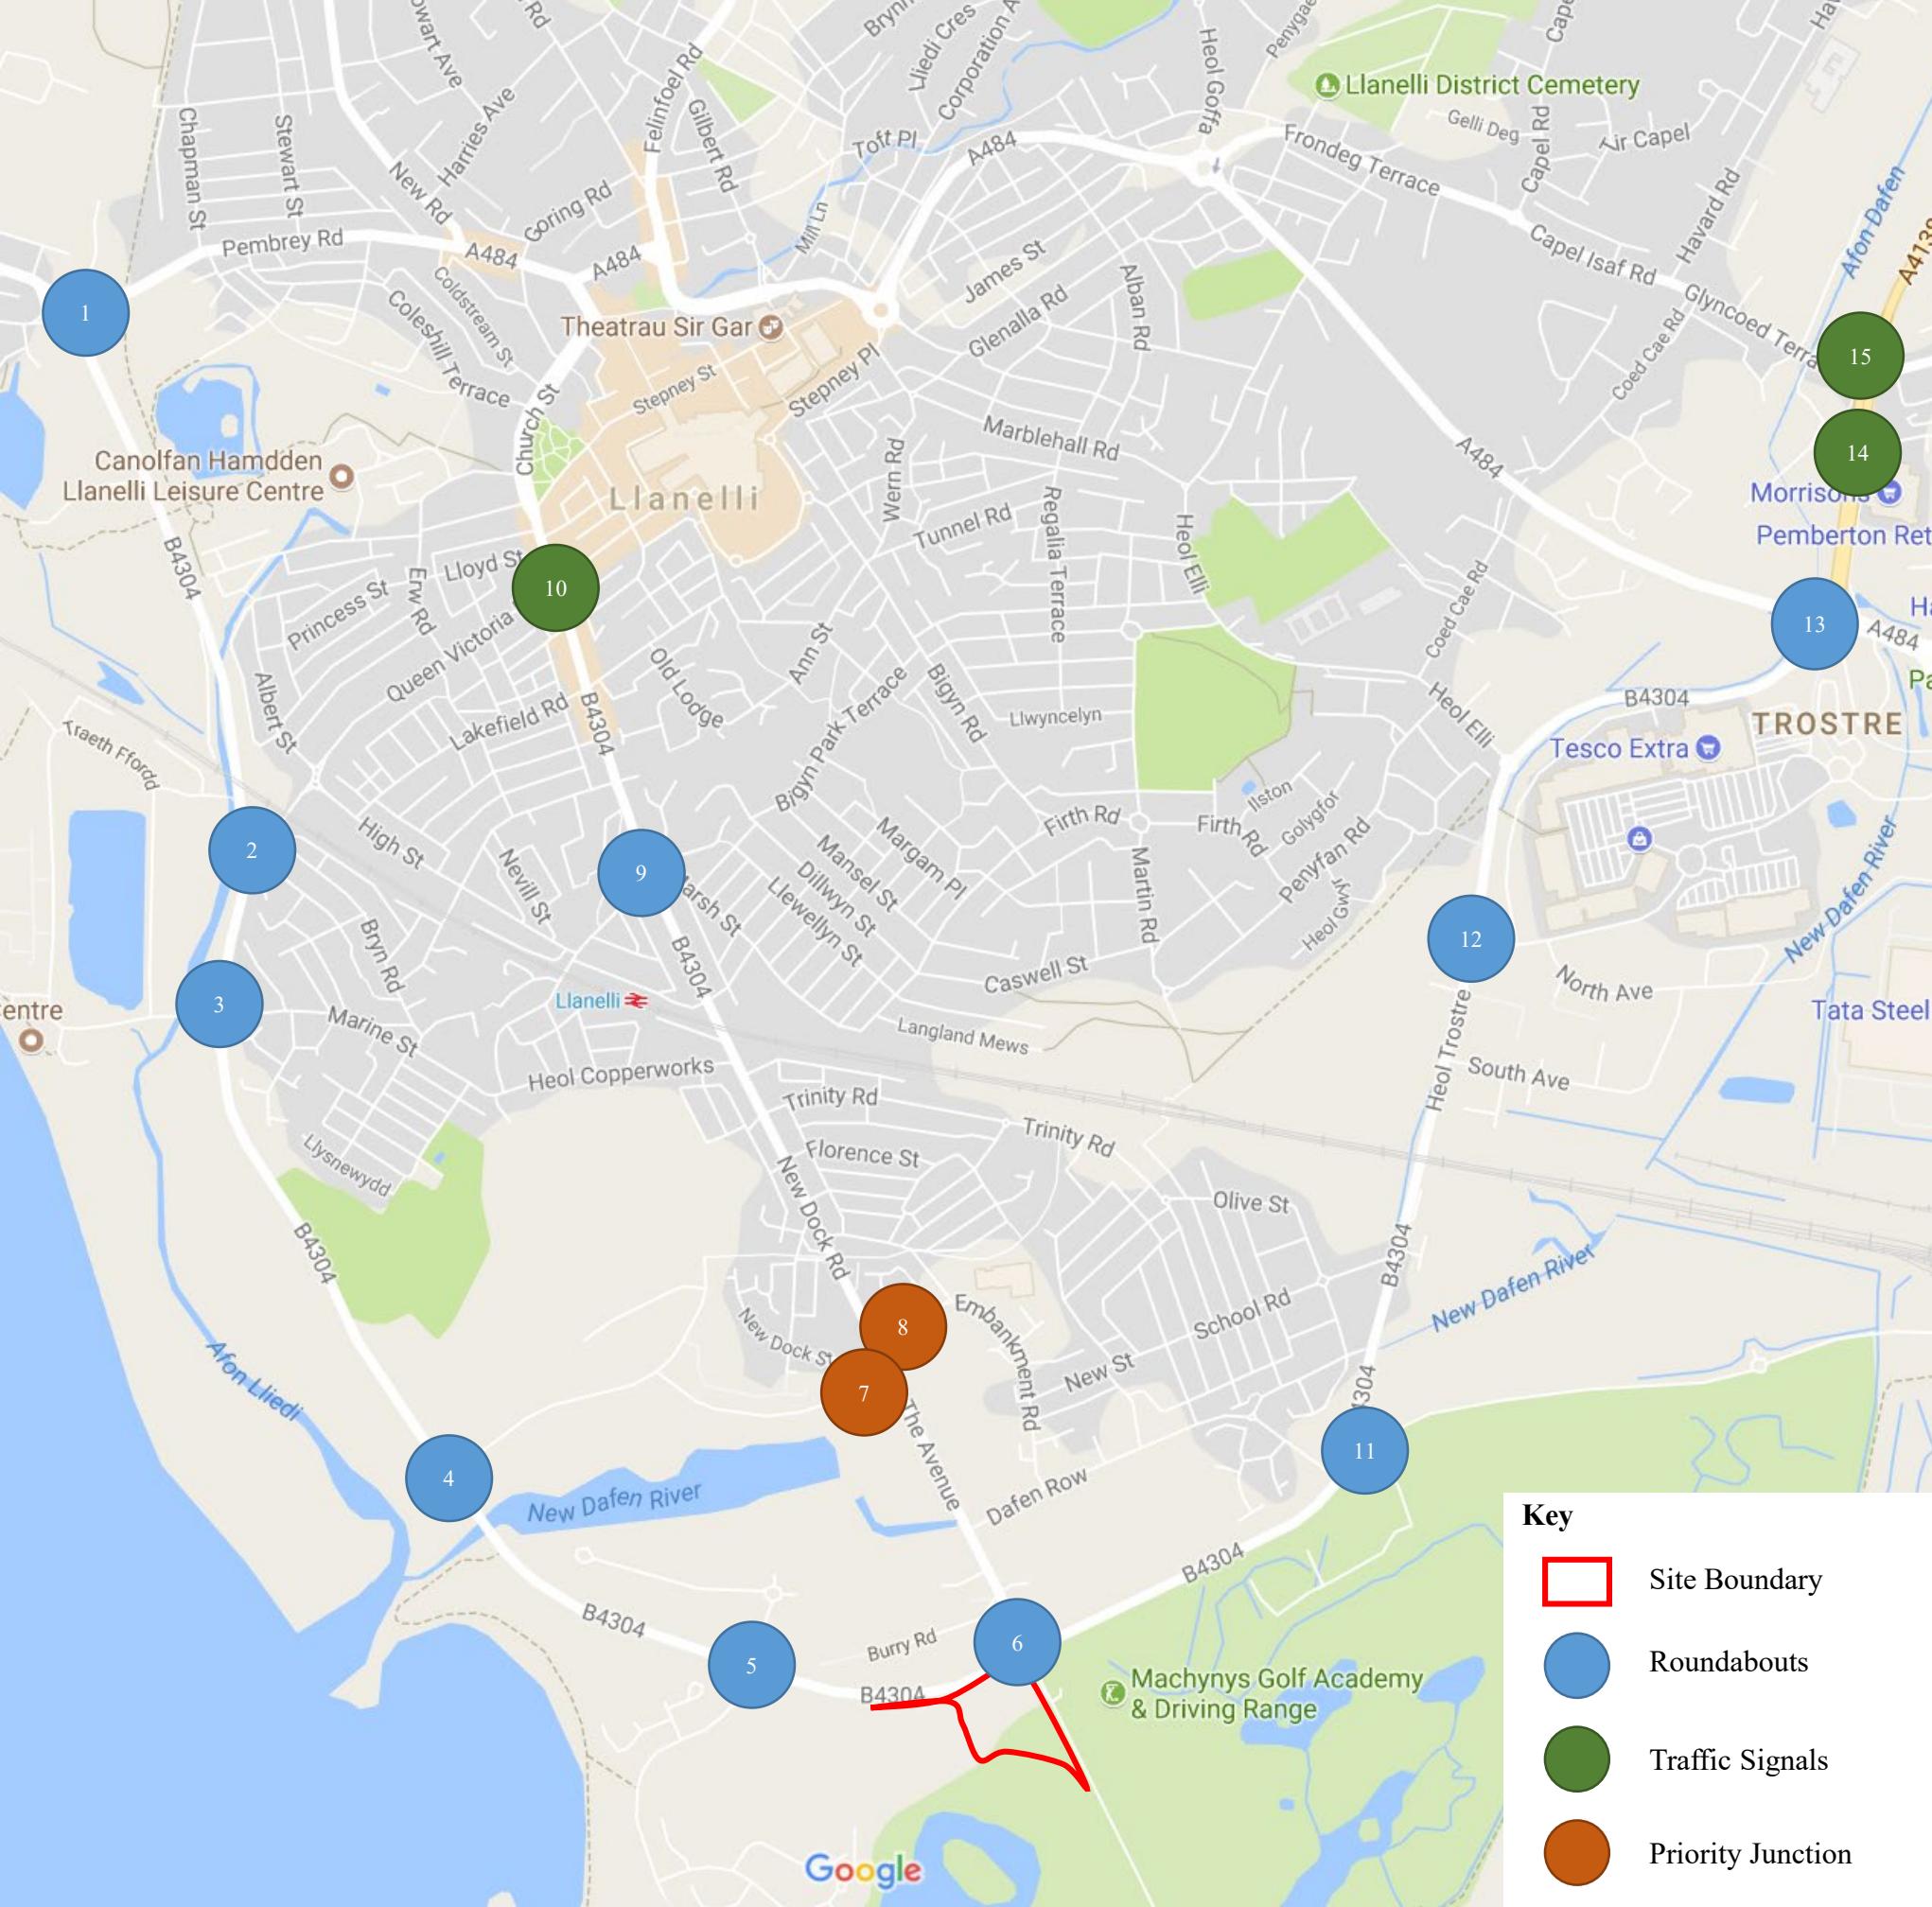

Due to the impact of Covid-19, a traffic survey was deemed inappropriate at the time of this assessment. It is assumed that the traffic pattern and flows are likely to gradually return back to levels prior to the onset of Covid-19. As agreed with CCC classified turning counts were used from the LWLV planning application. The surveys were completed on Wednesday 5th July 2017. In addition, a seven-day Automatic Traffic Count (ATC) survey was undertaken for the period 5th-11th July 2017.

on analysis of the ATC the AM network peak hour has been identified as 08:00-09:00 and the PM peak hour has been identified as 16:30-17:30.

The study area includes fifteen junctions have been surveyed in order to assess the impact of the proposed development. These junctions are listed below, and the locations are illustrated in Figure 9.

1. A484/Coastal Link Road/Sandpiper Road, Sandy Roundabout;
2. Coastal Link Road/Queen Victoria Way, Seaside Roundabout;
3. Coastal Link Road/Marine Street/North Dock, Lleida Roundabout;
4. Coastal Link Road/Copperhouse Road, Copperhouse Roundabout;
5. Coastal Link Road/Delta Lakes/Pentre Nicklaus, Delta Lakes Roundabout;
6. Coastal Link Road/The Avenue/Nicklaus Avenue, Machynys Roundabout;
7. The Avenue/Northumberland Road priority junction;
8. The Avenue/Embankment Road/North Dock Road priority junction;
9. B4304 Station Road/Glanmor Road/Marsh Street mini roundabout;
10. B4304 Station Road/Queen Victoria/Murray Street signalised junction;
11. Coastal Link Road/Lower Trostre Road, Morfa Roundabout;
12. Trostre Road/Trostre Park roundabout;
13. A484/Trostre Road/A4138, Trostre Roundabout;
14. A4138/Pemberton Park signals; and
15. A4138/Llandafen Road/Glyncoed Road signalised crossroads.

In agreement with CCC, these peak periods have been used to inform the traffic impact assessment for the development proposals. Traffic flows in the AM and PM peak hours are presented diagrammatically on Figure 10 and Figure 11 respectively.

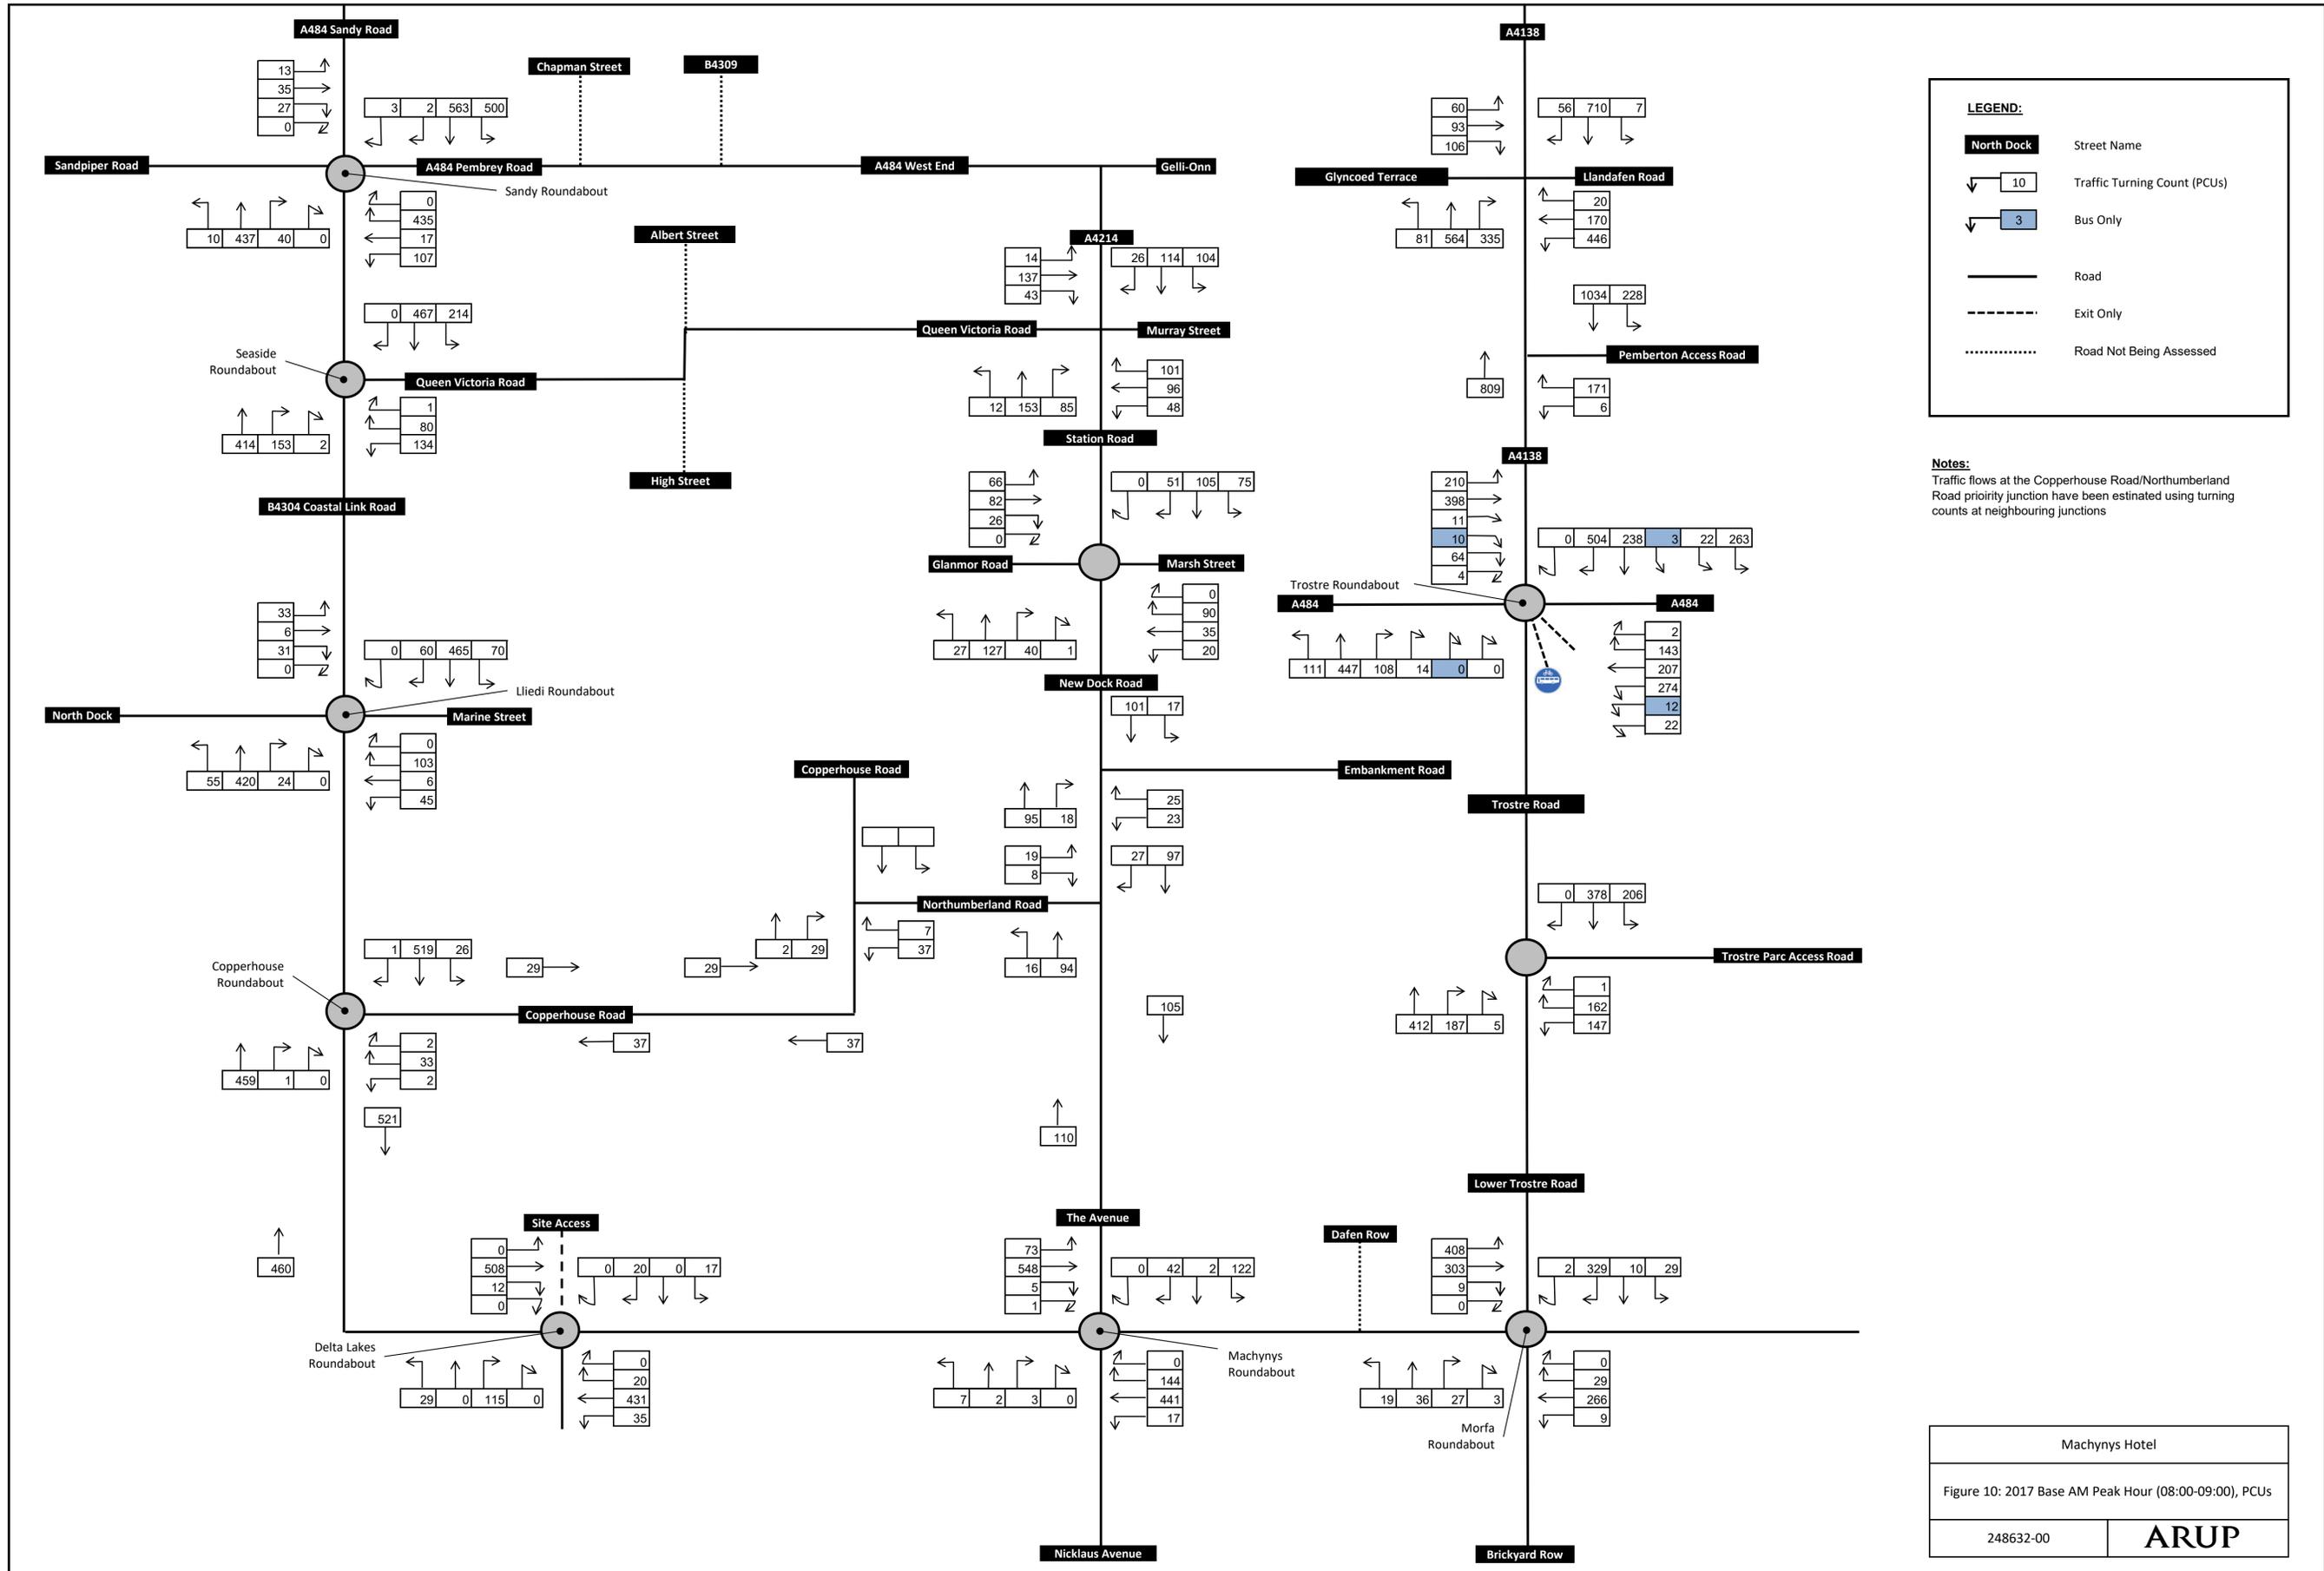

Junctions surveyed:

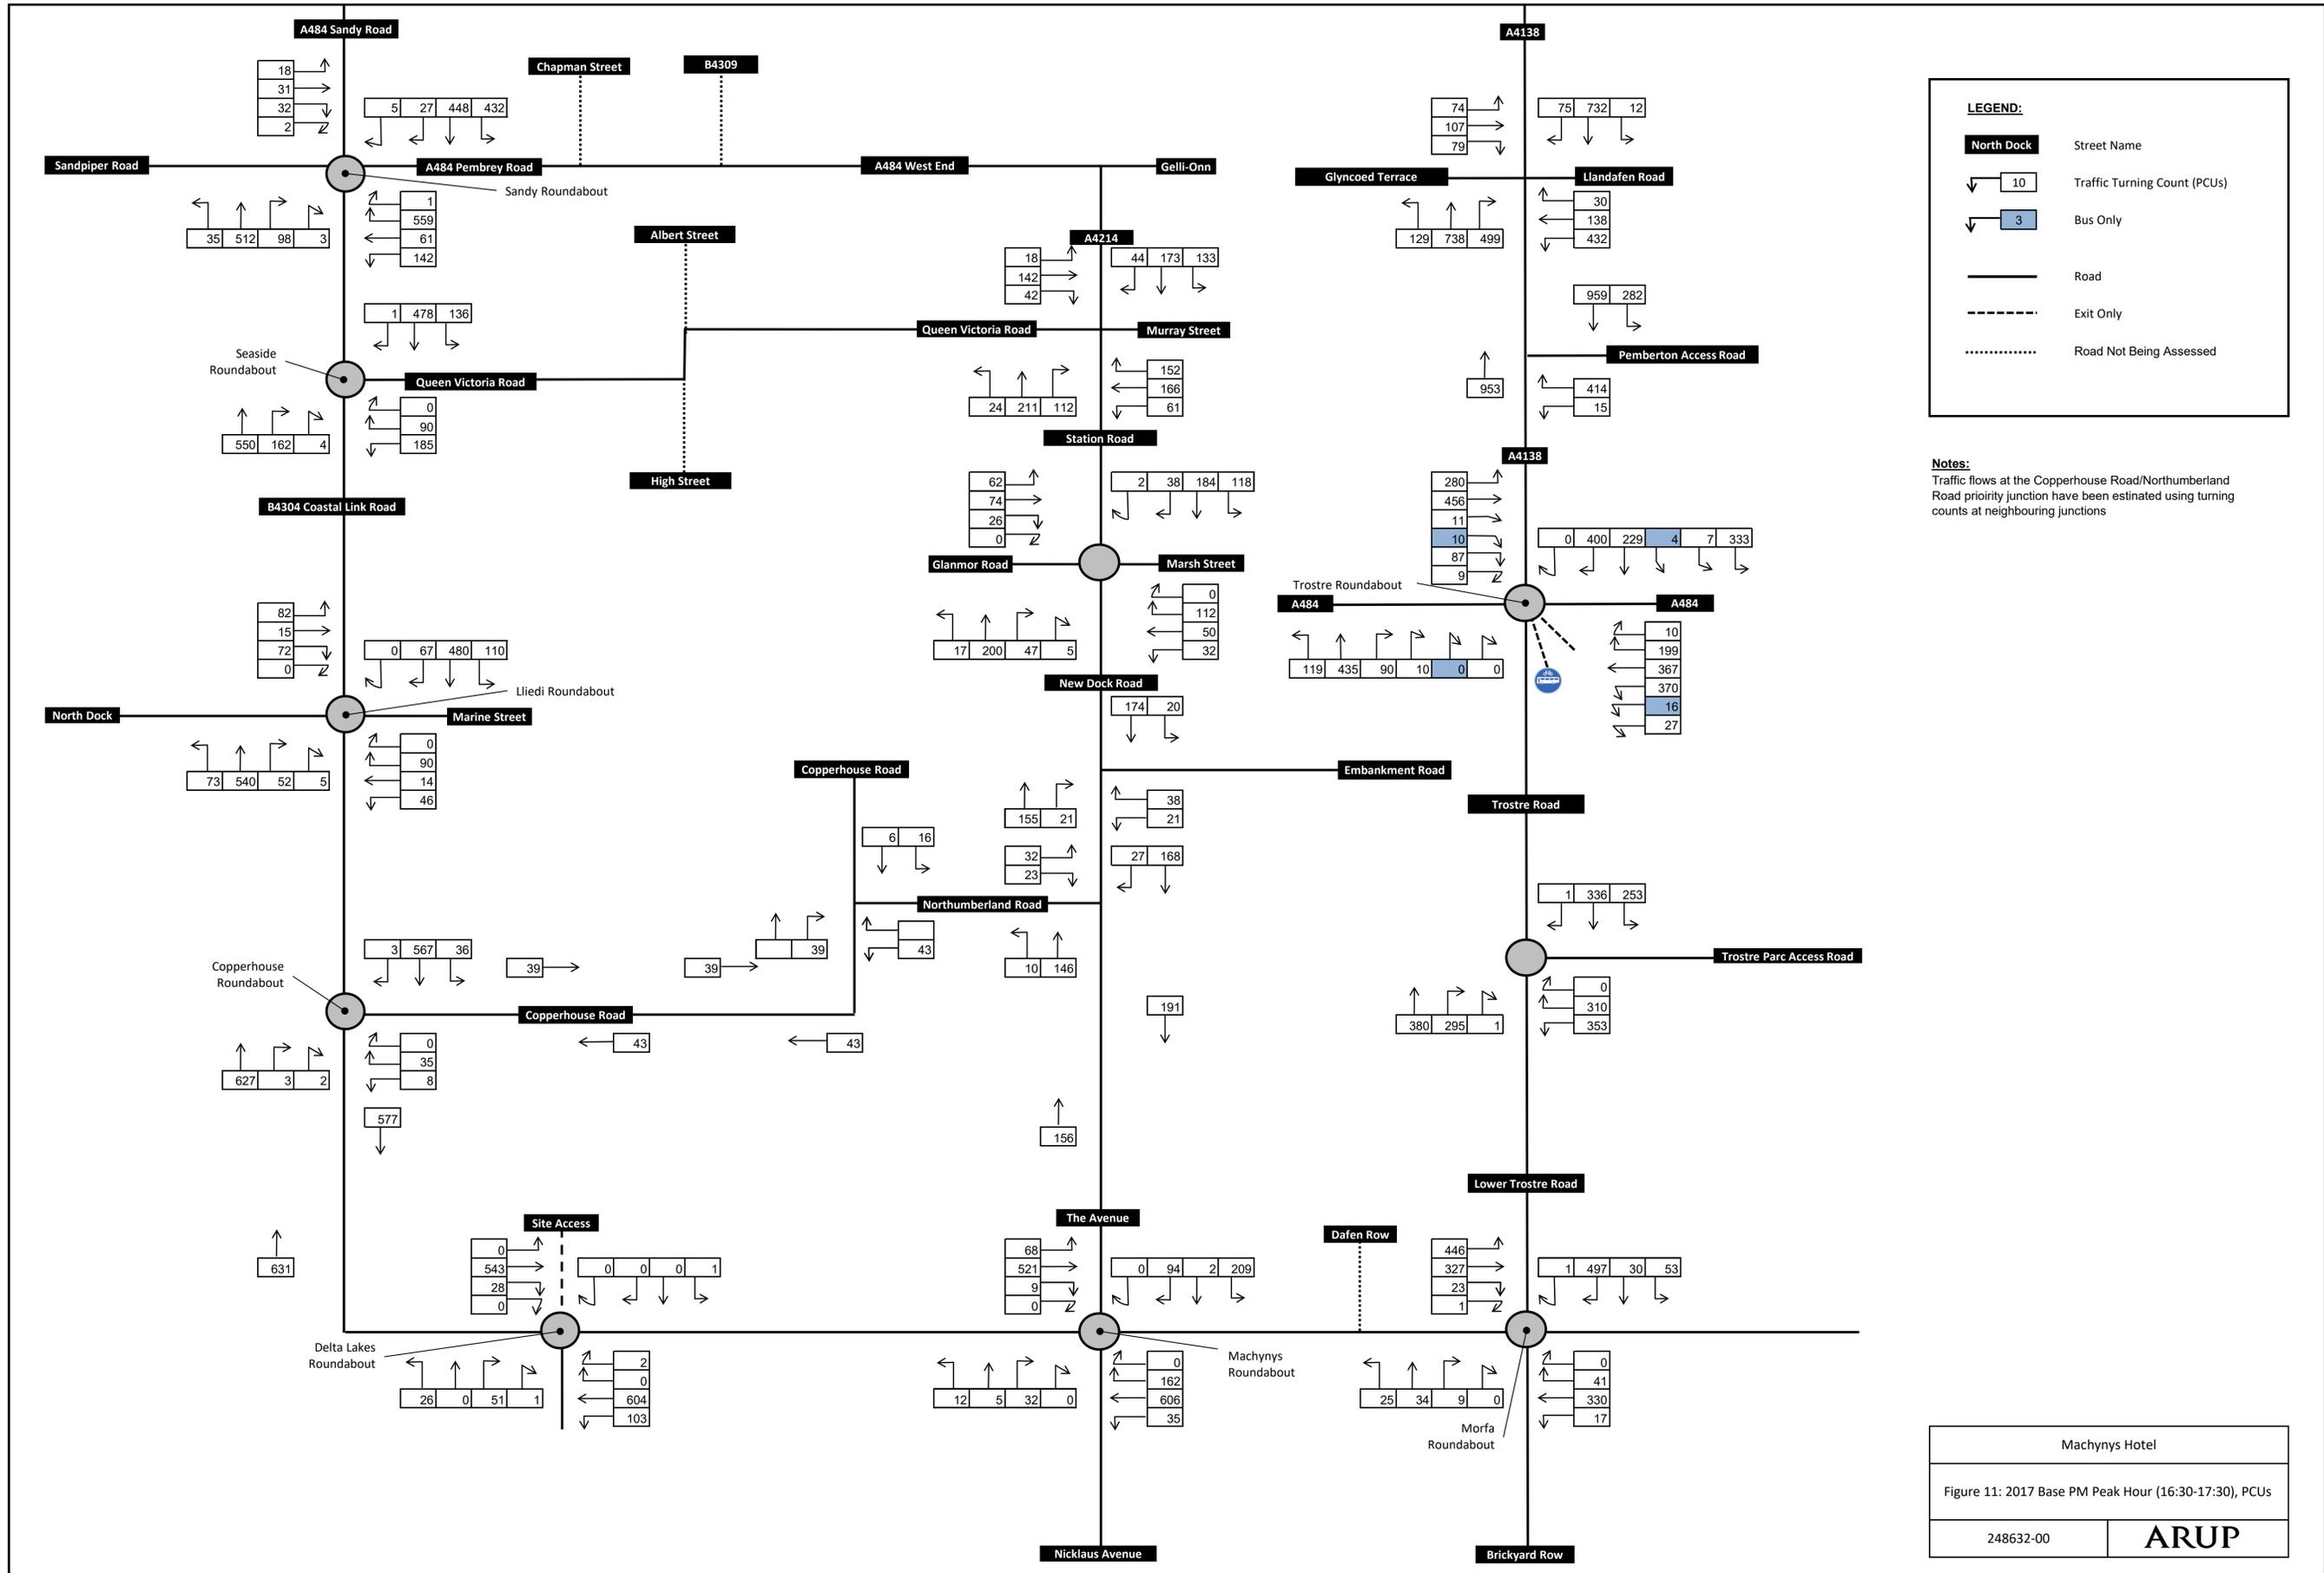

1. A484 / Coastal Link Road / Sandpiper Road Sandy Roundabout
2. Coastal Link Road / Queen Victoria Way Seaside Roundabout
3. Coastal Link Road / Marine Street / North Dock, Lliedi Roundabout
4. Coastal Link Road / Copperhouse Road Copperhouse Roundabout
5. Coastal Link Road/Delta Lakes/Pentre Nicklaus, Delta Lakes Roudnabout
6. Coastal Link Road / The Avenue / Nicklaus Avenue Machynys Roundabout
7. The Avenue / Northumberland Road priority junction
8. The Avenue / Embankment Road / North Dock Road priority junction
9. B4304 Station Road/Glanmor Road/Marsh Street mini-roundabout
10. B4304 Station Road/Queen Victoria/Murray Street signalised junction
11. Coastal Link Road / Lower Trostre Road Morfa Roundabout
12. Trostre Road/Trostre Parc
13. A484/Trostre Road/A4138 Trostre Roundabout
14. A4138/Pemberton Access signals
15. A4138/Llandafen Road/Glyncoed Road signalised crossroads

3.7 Road Traffic Collision Data

Accident data for the most recent available five-year period (2015 – 2019) has been obtained from the Carshmap (www.crashmap.co.uk) for the surrounding highway network. Road accident data is recorded by police when they attend the scene of an accident and medical assistance is required by one or more parties, therefore damage only accidents are omitted.

Accidents are categorised according to their severity:

- Slight – medical attention was required but no hospital stay was necessary;
- Serious – medical attention involving a hospital stay was required; and
- Fatal.

Table 3 and Table 4 summarise the main highway links/junctions within the study area and the number and nature of recorded accidents.

Table 3: Link Accident Summary by Severity

Road	Number of accidents 2011-2015			
	Slight	Serious	Fatal	Total
B4304 Coastal Road (south of railway)	4	1	0	5
The Avenue and New Dock Road (south of railway)	7	1	0	8
Heol Copperworks and Marine Street	1	0	0	1

Table 4: Junction Accident Summary by Severity

Junction	Number of accidents 2011-2015			
	Slight	Serious	Fatal	Total
The Avenue/B4304 Roundabout	1	0	0	1
Cambrian St/B4304 Roundabout	2	1	0	3
Lliedi Roundabout	1	0	0	1

No accident trend has been identified near to the proposed development. It is therefore considered, that additional traffic associated with the proposed development is unlikely to have a significant impact on the safety of the local highway network.

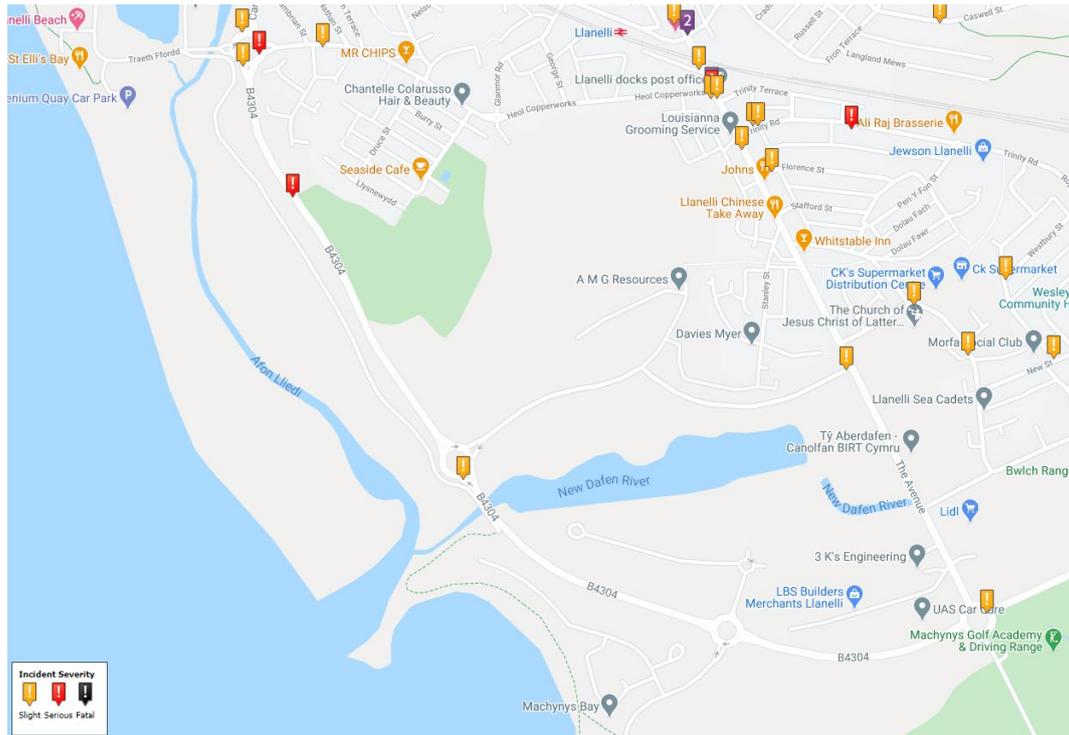

Figure 12: Road Traffic Collision (source: Crashmap)

3.8 Summary

The site is located close to existing facilities including a railway station and a local convenience store. From the assessment and investigation of existing conditions, the following are considered key priorities in creating a development with successful transport provision:

- Improved pedestrian and cycle facilities along the Coastal Road and The Avenue;
- Provision of improved quality bus stops either within or near to the development site; and
- Integrating the development proposals with nearby recent and approved future developments neighbouring the site.

4 Development Proposals

4.1 Introduction

This chapter provides an overview of the proposals and identifies the components of the new development.

4.2 Proposed Land Use

For the purposes of this TA, it is assumed that the proposed development consists of the following facilities:

- Up to four floors of hotel accommodation (up to 10,000 m²);
- External hard landscaping including roadways, paths and parking (approx. 8,400 m²); and
- A total of 140 bedrooms.

Other facilities such as a dining room/buffet area, bar and lounge area, reception and office area, meeting/conference rooms, vehicle access and vehicle parking will also be provided. Details of these elements will be agreed within the reserved matters process.

An indicative Masterplan for the site is included as Appendix B.

4.3 Pedestrian/Cycle Access

A pedestrian and cycle access to the proposed hotel will be provided as part of the development. This could be delivered by a potential uncontrolled crossing with central refuge island to the footway/cycleway to the north of the site across the B4304 near Machynys roundabout. Improvements to the existing facility will be agreed during the reserved matters stage.

Within the site zebra crossings will be provided across the internal road network providing a direct access through the car park straight to the hotel entrance to provide a 'pedestrian prioritised street' principle with limited delineation between vehicular, pedestrian and cycle provisions. These areas are expected to experience low levels of traffic movement and encourage low speeds which will make them attractive for walking and cycling.

As part of the LWLV proposals, there will be several positive revisions to the existing local pedestrian and cycle network that will also impact the Machynys Hotel, providing better infrastructure for pedestrian crossings between Coopers roundabout and the Delta Lakes Roundabout, located north west of the proposed hotel.

CCC Highways and Transport have indicated that it would be appropriate for this development to contribute towards elements of the Integrated Network Map

(INM) prepared as part of their responsibilities detailed by the Active Travel (Wales) Act (2013). The INM for Llanelli is included as Appendix C, showing both existing and proposed active travel routes.

Discussion on contributions on the wider active travel network will take place in the reserved matters process. It is expected that any improvements to the existing crossing of the B4304 at Machynys roundabout will be the subject of a section 278 agreement.

4.4 Public Transport

4.4.1 Bus

As part of the LWLV proposals, a new bus stop is proposed to the north of the Delta Lakes roundabout to serve the existing L1 service and any proposed improved services. First Bus have been approached to discuss potential improvements to the existing route and this discussion will continue in the next planning phase of the LWLV proposal. There is the opportunity to include the hotel proposals within these discussions where applicable.

Comments from CCC note that these agreements will need to be developed and confirmed during the relevant reserved matters stage. It is agreed that a joint approach with LWLV would be a beneficial approach for service improvements in the area.

4.4.2 Coach

It is anticipated that coach parking will not be provided for the hotel. However appropriate space will be allocated to enable larger vehicles, including coaches, to turn safely.

4.4.3 Rail

Whilst no improvements are proposed to Llanelli railway station or the associated services are proposed in relation to the hotel planning application, it is considered that the pedestrian and cycle proposals will improve the accessibility to the station for future occupiers of LWLV and existing residents to the south of the site with associated positive impacts for the Machynys hotel development.

Consideration should also be given to the implementation of an on demand shuttle style bus service between the railway station and the hotel.

4.5 Vehicular Access

There are multiple vehicle access options for the site, as set out below:

- A vehicular access junction off the B4304 Coastal Road providing access to the west of the hotel. The road design that will be submitted under Machynys Central Resident Development Planning Application in Appendix D; or

- A new vehicular access east of the site off the road which leads to the golf course: or
- A combination of both utilising access junction off the B4304 Coastal Road providing access to the west of the hotel for staff and service vehicles and a new vehicular access east of the site off the road which leads to the golf course for visitors.

The vehicle access strategy together with the detailed design of these site junctions will form part of the reserved matters application and will subject to a Road Safety Audit. The preliminary designs of the potential site access arrangements are described below.

Via Nicklaus Avenue

The proposed access provides direct access to the Machynys roundabout onto Nicklaus Avenue at the western boundary of the site. The road leads to the golf course located south of the site which is considered to have relatively low trip generation particularly during peak network periods. This is shown on the Masterplan included in Appendix B.

Via the planned residential junction

The proposed junction provides direct access to the hotel site and service area via a left in/left out priority T junction with a ghost island right turn lane. A preliminary junction design is included in Appendix D.

Full movement junctions typically have a lower traffic capacity as a result of opposed turning movements however the provision of a right turn ghost island on the B4304 will avoid delay to through traffic on the B4304 and traffic speeds and volumes are considered sufficiently low to allow safe gaps for right turning traffic.

Traffic volumes generated from the site will be relatively low and it is therefore considered that local traffic volumes and speeds will give adequate opportunity for traffic to turn.

The proposed junction leading straight into the hotel site area is suitable for a large three-axle refuse vehicle which will be able to manoeuvre within the service access area to be provided. Internal circulation around the car park will be confirmed as part of the reserved matters process.

4.6 Parking

Carmarthenshire County Council have adopted the “*County Surveyors’ Society (CSS) Wales Parking Standards 2014*” to determine the level of parking provision. This provides maximum parking standards according to land use, type and location of development.

The CSS standards recommend that the parking zone criteria to be applied on a site by site basis. Having reviewed the zoning criteria, the proposed development is considered to fall within “*Zone 4 -Suburban or near Urban*”.

The CSS standards include a means of accounting for the sustainability of a development's location through the assessment and award of sustainability points. A site qualifies for sustainability points if it meets set criteria for its proximity, in terms of walking distance to local facilities, public transport, cycle routes and frequent public transport. Achieving different levels of sustainability points can result in a reduction in parking requirements.

The CSS standards apply a standard which is illustrated in Table 5, it is considered appropriate to provide a minimum total of 141 off carriageway parking spaces for visitors and one commercial parking space. Total number of parking spaces and parking for non-resident staff will be determined within the reserved matters process.

The requirements also set out one cycle stand per five bedrooms for long stays and one stand per 40m² of public floor space for short stays. This results in a total of 28 cycle parking spaces for visitors. Cycle parking spaces for the development are likely to be provided near the hotel entrance or within proximity to the car parking facilities. More detailed information will be dealt with at reserved matters process.

The parking standards adopted by Carmarthenshire County Council (CSS 2014) predate important legislation and policy documents from Welsh Government, namely Planning Policy Wales 10 (2018).

It's therefore reasonable to suggest that when the adopted parking standards were drafted, they were not cognisant of recent policy which promotes a reduction in parking to encourage a modal shift towards sustainable modes of transport.

Parking facilities for electric vehicles will be included as part of the hotel development proposal. It is noted that all parking elements including quantum, drop-off and electric vehicle charging will form part of the reserved matters application.

Planning Policy Wales 10 was drafted in the context of the Wellbeing of Future Generations Act and embodies its objectives. It states that: "*Parking provision should be informed by the local context, including public transport accessibility, urban design principles and the objective of reducing reliance on the private car and supporting a modal shift to walking, cycling and public transport. Planning authorities must support schemes which keep parking levels down, especially off-street parking, when well designed*"².

Table 5 details car parking provision based on the CSS 2014 standards.

Table 5: Summary of proposed spaces for car and cycle parking based on CSS 2014

Land Use	Vehicle Factor	Quantum	Car Parking Requirements
Hotel and Public Houses: Operation use	1 commercial space	0	1

² Planning Policy Wales 10, 2018, 4.1.51

Hotel and Public Houses: Non-Operational use	1 space per 3 non-resident staff and 1 space per bedroom	Data not available for staff requirements. 140 bedrooms	140 car parking spaces
--	---	--	------------------------

5 Future Travel Demand

5.1 Introduction

This chapter presents the future travel demand expected to be generated by the proposed hotel development. This forms the basis for understanding the impact of the proposed development on the transport network. The vehicle trip generation forecasts will also enable the impact of the proposed development at each of the key junctions to be quantified.

Travel demand has been estimated from average trip rates and scale of the proposed development. The average trip rates used have been taken from the previous 2010 Transport Assessment for the hotel produced by Watermans which used the TRICS database. TRICS provides recent traffic surveys from developments in the UK and Ireland. The database is widely used in the Transport Assessment process to provide insight into the transport impacts of new developments.

5.2 Key Methodology Assumptions

Given the outline nature of the planning application, and potential for change to the proposed masterplan at subsequent planning stages, a robust approach has been taken in forecasting development related vehicular trips which can therefore be considered a worst-case scenario for junction assessment. The key assumptions include:

- AM and PM peak hours for the hotel correspond with surrounding highway network peak hours of 08:00-09:00 and 16:30-17:30 respectively;
- hotel trips generated using TRICS rates from the previous Watermans TA and include employee trips;
- All trips generated will travel by car for a worst-case assessment;
- Committed development sites, taken from the LWLV TA, and detailed in Section 6.3;
- All hotel deliveries will be made outside of the AM and PM peak hours, and therefore have not been included in the peak hour forecast.

Traffic flows for with and without development scenarios have been calculated for the following future year scenarios using TEMPro traffic growth factors:

- 2021 Base Year;
- 2021 with Committed Development;
- 2021 with Committed Development and Hotel Development; and
- 2026 Future Year Assessment.

5.3 Committed Developments

Following consultation with CCC as the local planning authority and the local highway authority, the following committed development sites are included within the traffic impact assessment:

- Machynys East Residential Development (213 residential units of which 180 were occupied at the time of the 2017 traffic surveys);
- Machynys Central Residential Development and Eco Park (35 Units);
- Seaside Primary School (up to 420 pupils plus 60 nursery places); and
- Stradey Park Residential Development (355 residential units of which 200 were occupied at the time of the traffic surveys).

Information about these developments has been taken from the approved LWLV planning application which in turn used the CCC website and online planning portal. A TA or Transport Statement has been obtained for each of the above sites with the resulting traffic impacts included within the Percentage Impact Assessment detailed in Chapter 7 of this TA.

Below is a summary of the additional trips expected after the time of the 2017 survey and the forecasted trips predicted to be generated from the LWLV Mix Use Development.

Table 6: Committed Development Trips

Development	AM Peak Hour			PM Peak Hour		
	In	Out	Two way	In	Out	Two Way
Machynys East Residential Development (33 units)	8	24	32	18	8	25
Machynys Central Residential Development (35 units)	9	25	34	19	8	27
Seaside Primary School	113	61	174	5	11	16
Stradey Park Residential Development (155 units)	21	66	87	62	36	98
Wellness and Life Science Village Mix Use Development	406	105	511	183	396	579

5.4 Background Traffic Growth

Due to Covid-19 and timescales of the outline planning application it was deemed that a survey would not be appropriate at this time, and it is assumed that the traffic pattern is likely to return back to pre-covid trends in future. The uptake in active travel and public transport may increase as a result of infrastructure upgrades and potential new bus services to the area but for a robust assessment, the 2017 surveyed data which was used for LWLV TA 2018 application will be utilised. As agreed with CCC a growth factor has been applied to represent a 2021 base year for traffic flows.

Background traffic growth factors have been derived from the Department for Transport (DfT) Trip End Model Presentation Program (TEMPro v7.2). To account for the quantum of committed and proposed development already incorporated within the traffic analysis, use of a standard TEMPro factor would result in significant double counting of future development trips and over estimation of potential traffic growth.

It is possible to modify the TEMPro planning assumptions by removing the committed development and proposed development households and jobs from the traffic growth estimates in order to eliminate the effect of double counting. Given the quantum of proposed development and inclusion of a number of committed development sites, it is considered reasonable to remove these from the TEMPro planning assumptions

The TEMPro growth factors based on these alternative assumptions are set out in Table 7.

Table 7: TEMPro Traffic Growth Factors

Growth Factors		
Period	AM Peak	PM Peak
2017-2021	1.0615	1.0596
2021-2026	1.1202	1.1337

The factors set out in the above table have been applied to the 2017 Base traffic flows in order to create future year assessment scenarios.

5.5 Trip Generation

Trip rates have been taken from the Transport Assessment for the previous 125 bed Machynys hotel planning application which was granted full planning application in 2010. TRICS was used compare trip rates in the current database but since these would have been lower than those in the 2010 application the higher trip rates have been used as part of the robust assessment for the proposed 140 bed hotel. Trip Generation may be revisited/revised to a lower level as part of the reserved matters process.

The vehicle trip rates for the proposed development are presented in Table 8.

Table 8: Proposed Trip Rate and Trip Generation for Machynys Hotel (140 bed)

	Trip Rates (per bed)			Vehicular Trip Generation		
	In	Out	Two-way	In	Out	Two-way
AM Peak	0.15	0.24	0.39	21	34	55
PM Peak	0.27	0.16	0.43	38	22	60

The development is forecast to generate about 55 to 60 vehicle trips during each peak hour.

The trips generated reflect the proportion of 'business as usual' trips made by car only (with additional trips to be made by other transport modes) but do not

consider the potential mode shift (and hence reduction in car traffic) that might arise from the implementation of a Travel Plan.

5.5.1 Trip Distribution

The distribution of trips on the local highway network has been agreed with CCC and is based on a 70/30 split; with 70% travelling to/from the northeast along Trostre Road, and 30% travelling to/from the northwest from Sandy Roundabout.

Distribution of all committed developments are taken from the LWLV application which used information from the CCC website and online planning portal.

All distributions are illustrated within Appendix E.

5.5.2 Mode Share

Using TRICs data, a mode share split can be identified for similar UK hotel sites. Although it is assumed that all traffic in this assessment will be made via car to represent a worst-case scenario, it is unlikely to be the case in real time and an estimate of 13% of total trips will be made by sustainable modes of transport or other. The typical mode share for a hotel development based on TRICs analysis is presented in Table 9.

Table 9: Mode share of hotel trips

Mode	Percentage
Car	87%
Public transport (Bus/coach/train)	1%
Cycling	1%
Walking	6%
Taxi	5%
Total	100%

5.6 Summary

This section provides a forecast of the future travel demand associated with the development of the Machynys Hotel site and the following conclusions can be drawn:

- The methodology for projecting travel demand has been agreed through a scoping exercise with CCC;
- Development trips for committed development sites have been added to the future year traffic flows, and as a result the planning assumptions for background TEMPro traffic growth have been modified to avoid double counting; and
- The proposed development is forecast to generate around 55 two-way vehicle trips in the AM peak hour and around 60 in the PM peak hour.

6 Transport Implementation Strategy

6.1 Introduction

In accordance with TAN 18, this chapter is intended to draw together the elements of a Transport Implementation Strategy as part of demonstrating how the development will contribute positively to overarching policy objectives.

6.2 Context

The policy context in Chapter 2 highlighted the importance of sustainability in national, regional and local policy. This has provided a key guiding principle in the overall concept and design of the Machynys Hotel development in how the proposals aim to minimise the need to travel. As a result from the LWLV commitments, inclusion of local employment facilities and the establishment of new pedestrian and cycle links to the neighbouring areas and facilities of Llanelli, forms a critical component of the vision for the hotel as a sustainable development for which walking, cycling and public transport are often the most convenient and quickest forms of transport to local destinations.

6.3 Objectives

Sections 3 (Transport Evaluation) and 4 (Development Proposals) have highlighted the relevance of the proposals to a range of overarching objectives, ranging from the day-to-day efficiency of the development to broader planning and transport aspirations towards more sustainable travel patterns.

The Transport Implementation Strategy is therefore underpinned by the following over-arching objectives;

- Objective 1 to reduce the need to travel locally within Llanelli via single car occupancy;
- Objective 2 to achieve accessibility and convenience by walking, cycling and public transport within Llanelli to reduce carbon emissions associated with the site;
- Objective 3 to provide necessary supporting infrastructure to support the operation of the proposed development;
- Objective 4 to promote cohesive communities and social inclusion, including integration with existing communities;
- Objective 5 to promote healthy lifestyles to maximise physical and mental well-being; and
- Objective 6 to create conditions that provide safety and security for all including the surrounding communities.

6.4 Measures of Mitigation

This section sets out the mitigation measures that will be implemented for each mode of transport for the operation of the hotel.

The transport related measures proposed in relation to the hotel are:

- Connection to a network of footways and shared footway/cycleways that intersect and border the site, improving connectivity for pedestrians and cyclists;
- Provision of pedestrian access points and internal traffic-free routes contributing to a high-quality public realm;
- Provide pedestrian and cycle links to the Millennium Coastal Path;
- Provision of cycle parking spaces around the site and at a level that meets CCC guidance;
- Potential for the partial subsidy funding to support a new of bus service or extend an existing service into the site in line with and in proportion to the commitment given by neighbouring developments;
- Provision of local employment to reduce the need to travel via car;
- To provide supporting infrastructure for electric vehicle charging provisions on site; and
- Commitment to prepare and implement a full Travel Plan for the proposed hotel.

7 Assessment of Transport Implementation Strategy

The assessment measures of the transport impact strategy and the key objectives are set out in detail in Sections 7. The mitigation measures are taken forward for appraisal against the baseline conditions of current infrastructure for the operation of Machynys Hotel.

A qualitative assessment using a seven-point assessment scale presented in chapter 8.1 has been used to assess the impact for public transport, active travel and car parking.

A quantitative assessment has been carried out for highways based on junction capacity using modelling software and is presented in chapter 8.2.

7.1 Active Travel, Public transport, and Car Parking

The mitigation measures for walking, cycling, bus, rail and car parking are taken forward for appraisal against the baseline conditions of current infrastructure for the operation of Machynys Hotel.

The impact of measures against the objectives has been assessed according to a seven-point scale as set out in Figure 13.

Figure 13: Seven Point Assessment Scale of Transport Implementation Strategy Impact

Large Beneficial Impact	+++
Moderate Beneficial Impact	++
Slight Beneficial Impact	+
Neutral	0
Slight Adverse Impact	-
Moderate Adverse Impact	--
Large Adverse Impact	---

The appraisal assesses all mitigation measures that are identified to ensure that the site aligns with TAN18, as defined in the TIS. The impact of these measures ranges from having a neutral to large beneficial impact against the objectives set out in the TIS, with the exception of car parking facilities which has a potential large adverse impact. Although the objectives of the Machynys Hotel are to enable travel options via sustainable modes of transport, car parking facilities will need to be provided given the location of the site and the expectation that workforce may not all be locally based and that guests are expected from a variety of regional, national and international origins.

The number of available parking spaces should be determined by applying local parking standards to the nature of the proposed facilities within the site and ensure there is enough provision for the operation purposes of the hotel. These should be reviewed on a regular basis as part of the Hotel Travel Plan.

Table 10: Assessment summary for Transport Implementation Strategy - Operation

Transport Implementation Strategy: Mitigation Measures		Objective 1 Reduce the need to travel via car locally	Objective 2 Achieve accessibility and convenience	Objective 3 Provide supporting infrastructure	Objective 4 Promote community and inclusion	Objective 5 Promote a healthy lifestyle	Objective 6 Provide safety and security
Walking	Connection to a network of footways and shared footway/cycleways that intersect and border the site, improving connectivity for pedestrians and cyclists	0	+	0	+	++	+++
	Provision of pedestrian access points and internal traffic-free routes contributing to a high-quality public realm	0	+++	+++	0	0	+++
	Provide pedestrian and cycle links to the Millennium Coastal Path	++	++	+	+++	+++	+
Cycle	Connection to a network of footways and shared footway/cycleways that intersect and border the site, improving connectivity for pedestrians and cyclists	0	+	0	+	++	+++
	Provision of pedestrian access points and internal traffic-free routes contributing to a high-quality public realm	0	+++	+++	0	0	+++
	Provide pedestrian and cycle links to the Millennium Coastal Path	++	++	+	+++	+++	+
	Provision of cycle parking spaces around the site and at a level that meets CCC guidance	++	+++	+++	++	+++	++
Bus	Potential for the partial subsidy funding to support a new of bus service or extend an existing service into the site in line with and in proportion to the commitment given by neighbouring developments	+++	+++	+++	+++	+++	0
Car parking	Provision of local employment to reduce the need to travel via car	0	0	0	+++	+	0
	Commitment to prepare and implement a full Travel Plan for the proposed hotel	+	0	0	+	+++	0
	To provide support infrastructure for electric vehicle charging provisions on site	---	---	+++	0	--	0

7.2 Highways

This section presents the capacity assessments undertaken at each of the junctions within the assessed network agreed with CCC. These assessments provide the basis for determining whether the additional traffic generated by the development proposals can be accommodated without detriment to the highway network.

The junction models used in this assessment are equivalent to those used for the LWLV application with updated flows used to represent the estimated trips generated from the 140-bed hotel in addition to existing traffic flows and those forecast for committed developments in the area.

7.2.1 Percentage Impact Assessment

A percentage impact assessment has been undertaken to identify the proportional increase in traffic resulting from the development proposals on the junctions. This has been calculated using the 2021 Base traffic flows for robustness. Two options for the hotel access were assessed separately:

- **Option 1 via Nicklaus Avenue** – A new vehicular access east of the site off the road which leads to the golf course; and
- **Option 2 via the planned residential junction** – A vehicular access junction off the B4304 Coastal Road providing access to the west of the hotel.

In agreement with CCC, the results of the percentage impact assessment will influence which junctions within the study area will be assessed further using junction capacity modelling. The results of the percentage impact assessment are summarised in Table 11.

Table 11: Percentage Impact Assessment

Junction	Option 1		Option 2	
	AM	PM	AM	PM
1. Sandy Roundabout (A484/Coastal Link Road/Sandpiper Road)	0.6%	0.6%	0.6%	0.6%
2. Seaside Roundabout (Coastal Link Road/Queen Victoria Way)	0.9%	1.0%	0.9%	1.0%
3. Lledi Roundabout (Coastal Link Road/Marine Street/North Dock)	1.0%	0.9%	1.0%	0.9%
4. Copperhouse Roundabout (Coastal Link Road/Copperhouse Road)	0.8%	1.5%	0.8%	1.5%
5. Delta Lakes Roundabout (Coastal Link Road/Delta Lakes/Access Road)	0.9%	0.9%	2.2%	1.7%
6. Machynys Roundabout (Coastal Link Road/The Avenue/Nicklaus Avenue)	3.0%	2.7%	2.1%	1.9%
7. The Avenue/Northumberland Road Priority Junction	0.0%	0.0%	0.0%	0.0%
8. The Avenue/Embankment Road/North Dock Road Priority Junction	0.0%	0.0%	0.0%	0.0%
9. B4304 Station Road/Glanmor Road/Marsh Street Mini-Roundabout	0.0%	0.0%	0.0%	0.0%
10. B4304 Station Road/Queen Victoria/Murray Street Signalised Junction	0.0%	0.0%	0.0%	0.0%

Junction	Option 1		Option 2	
	AM	PM	AM	PM
11. Morfa Roundabout (Coastal Link Road/Lower Trostre Road)	2.0%	1.9%	1.9%	1.6%
12. Trostre Road/Trostre Parc Roundabout	1.7%	0.9%	1.7%	0.9%
13. Trostre Roundabout (A484/Trostre Road/A4138)	0.9%	0.9%	0.9%	0.9%
14. A4138/Pemberton Access Signalised Junction	1.2%	1.1%	1.2%	1.1%
15. A4138/ Llandafen Road/Glyncoed Road Signalised Crossroads	1.0%	1.0%	1.0%	1.0%
16. Proposed Machynys Central Residential Access	4.4%	4.4%	17.9%	11.5%

7.2.2 Junction Modelling

7.2.2.1 Method of Assessment

Junction assessments have been undertaken for five junctions using Junctions 9 ARCADY module for roundabouts and Junctions 9 PICADY software for priority junctions.

Junction capacity in the above software packages is measured as the Ratio of Flow to Capacity (RFC). RFC is a measure of the volume of traffic making a turning movement at the junction, divided by the capacity of that movement; ascertained from the geometric measurements of the junction. The generally agreed operational capacity of a junction is at a ratio of 0.85 for roundabouts and priority junctions. Junctions can still operate within capacity with an RFC value of up to 1, however as practical capacity is approached traffic delays and queues will increase.

These parameters have been used to summarise the operational effectiveness of individual junctions in accordance with the following pre-determined thresholds:

	Within Practical Capacity – junctions with an RFC below 0.85 have been deemed to operate within practical capacity.
	Over Practical Capacity, Approaching Theoretical Capacity – junctions with an RFC of between 0.85-0.99
	Over Theoretical Capacity - junctions with an RFC over 1.00 have been deemed to operate over theoretical capacity with substantial queuing/delays.

Interaction between the junctions has been considered as a result of the predicted queues; some of the junctions are located close to one another, as a result of which excessive queues may affect the operation of adjacent junctions ‘blocking back’. The mean maximum queue forecast to occur on each arm of the junction has been monitored for this reason.

The geometric parameters used for the junction models have been measured from OS mapping data and proposed access drawing. Queue lengths predicted by the model have been compared with observed queue lengths which were measured at each of the junctions on Wednesday 5th July 2017, the same day traffic flows were surveyed.

Differences between model and survey queue lengths were adjusted by calibrating model junction arms which involved applying a capacity adjustment. The

percentage applied considers site specific conditions once all geometric features have been calculated for a junction arm.

7.2.2.2 Assessment Scenarios

As per the CCC Transport Assessment Guidelines, the traffic impacts of the development proposals will be assessed against the assumed opening year of development and a future horizon year. In agreement with CCC, the opening year of development will inform any potential mitigation proposals whilst the horizon year is provided as a sensitivity test only.

In agreement with CCC, it is proposed to assess the following future year scenarios in order to forecast the traffic impacts of the development proposals on the surrounding highway network:

- 2021 with committed development;
- 2021 with committed development and Machynys Hotel; and
- 2026 with committed development and Machynys Hotel.

7.2.2.3 Junction Assessment Results

As a result of the percentage impact analysis and in agreement with CCC, junction modelling has been undertaken for:

- Machynys Roundabout,
- Delta Lakes Roundabout,
- Morfa Roundabout,
- Copperhouse Roundabout; and
- the proposed Machynys Central Residential access from the B4304

All geometries were measured using OS mapping data and the proposed Machynys Central Access drawing in Appendix D.

Below summarise the junction capacity assessments and Table 13 presents a summary of the junction delay. Full modelling reports can be found in Appendix G.

Machynys Roundabout

Modelling results indicate that RFC ratios for all arms are below 0.62, and that delays are negligible, as shown in Table 13. Therefore, Machynys Roundabout is forecast to operate comfortably with the forecasted traffic in all future year assessment scenarios.

Delta Lakes Roundabout

Modelling results indicate that RFC ratios for all arms are below 0.60, and that delays are negligible, as shown in Table 13. Therefore, Delta Lakes Roundabout is forecast to operate comfortably with the forecasted traffic in all future year assessment scenarios.

Morfa Roundabout

Table 12 presents the capacity adjustments that were made in order for the forecast queues to better reflect the observed queue lengths.

Table 12: Morfa Roundabout ARCADY Model Capacity Adjustments

Arm		Capacity Adjustment
1	Lower Trostre Road	90%
2	B4303 Link Road	48%
3	Brickyard Row	No adjustment
4	B4304 Coastal Link Road	No adjustment

Morfa Roundabout is forecast to operate within practical capacity in the future year assessment scenario 2021 with Committed Development and Machynys Hotel trips in the peak hours. All RFC ratios for each arm are under 0.81, and overall junction delay is negligible as shown in Table 13. It is therefore demonstrated that the development trips associated with Machynys Hotel can be accommodated without any mitigation.

In the horizon assessment scenario 2026 with Committed Development and Machynys Hotel, the junction is forecast to just exceed practical capacity and approach theoretical capacity in the PM peak hour, with an RFC of 0.86 for access via Nicklaus Avenue, and 0.85 via the Machynys Central access on the link Road eastern arm. Given this is a sensitivity test, and overall junction delay is minimal no mitigation is proposed.

Junction 9 modelling reports contain further details of the modelling results showing RFC's and delay for each arm of Morfa roundabout and is within Appendix F.

Copperhouse Roundabout

Copperhouse Roundabout is forecast to operate comfortably within practical capacity in all future year assessment scenarios with all RFC ratios for each arm under 0.47.

Proposed Machynys Central Residential Access

The preliminary drawing of the proposed access can be found in Appendix B. Junction capacity modelling indicates that RFC ratios on all arms are below 0.1, and delay is negligible, as shown in Table 13.

7.2.2.4 Summary

Based on the results of the junction capacity assessments for junctions where the traffic associated with the Machynys hotel would increase traffic volumes by more than 2% presented in this section, no mitigation is proposed for the junctions assessed.

It is also noted that junction mitigation measures identified in the LWLV application will further reduce the overall impact on the local network.

Table 13: Summary of the Junction Capacity Assessment Results, Junction Delay (s) with hotel access via Nicklaus Avenue

Junction	2017 Survey		2021 Base		2021 with Committed Development		2021 with Committed Development and Machynys Hotel				2026 with Committed Development and Machynys Hotel			
							Option 1 via Nicklaus Avenue		Option 2 via Machynys Central		Option 1 via Nicklaus Avenue		Option 2 via Machynys Central	
	AM	PM	AM	PM	AM	PM	AM	PM	AM	PM	AM	PM	AM	PM
1. Machynys Roundabout (Coastal Link Road/The Avenue/Nicklaus Avenue)	3.08	3.31	3.20	3.48	3.78	4.28	3.84	4.42	4.01	4.72	3.86	4.40	4.03	4.64
2. Morfa Roundabout (Coastal Link Road/Lower Trostre Road)	5.75	8.10	6.11	9.24	7.99	12.43	8.20	13.48	8.96	17.11	8.15	13.15	8.90	16.55

8 Management of Construction Traffic

The traffic related to the construction phase of development will comprise:

- the transport of personnel engaged in the works; and
- the delivery of materials and equipment.

The development site can be accessed directly from the B4304 Coastal Link Road which acts as a ring road around Llanelli. This road is used by HGVs and is therefore considered appropriate for the use by construction vehicles. The impact of construction vehicles on severance, pedestrian amenity and fear and intimidation will be assessed within the reserved matters process and future documentation.

It is anticipated that majority of the vehicular activity would occur outside the highway peak periods and could be reduced by the earthworks utilising site material, rather than requiring deliveries by road.

Heavy loads, potentially including dumper trucks and cranes will need to be brought to the site. In addition, quantities of building materials will need to be delivered to the site throughout the construction period.

The number of deliveries of building materials is expected to vary during the construction programme. In general, heavy goods vehicles associated with the proposed construction are not expected to present any traffic capacity problems on the road network due to the minimal trips per hour made by such vehicles in comparison to future traffic capacity modelling undertaken. The associated vehicles are therefore expected to have a limited impact on local communities during the construction of the proposed development.

The impact of construction traffic on the network is not expected to cause undue inconvenience to other road users given the proximity of the site to the strategic road network. However, in order to ensure that construction activity is minimised it is recommended that the contractor(s) produces a Construction Traffic Management Plan (CTMP) in consultation with CCC.

It is anticipated that a contractor will be appointed for the overall development of the site. As such, there could be benefit in a Framework CTMP being developed that set out the general principles and standards that should be adopted for the individual CTMPs.

This Framework CTMP and subsequent plot specific CTMPs will address the following:

- traffic signage and signalling necessary for the direction and control of approaches to the site;
- suitable routes for materials and for the transport of employees to and from the site. The emphasis here will be to limit the use of the private car;
- details of any operations, which will obstruct public roads in a way that restricts the free passage of vehicles; and

- timing of operations and procedures will be discussed with CCC prior to the commencement of construction works.

With the appropriate traffic management procedures in place, the impacts arising from construction of the proposed development will be reduced. This will be further addressed in the reserved matters process.

9 Framework Travel Plan

9.1 What is a Travel Plan?

A Travel Plan (TP) provides a site occupier with the opportunity to actively commit towards creating a development that encourages modal shift towards sustainable transport.

A TP sets achievable targets for applicants and occupiers to pursue within a defined timescale. The most successful TPs are live documents that evolve with a development and in which several stakeholders including the developer, management company, tenants and local authority have a role in developing and monitoring.

Where an 'end user' or 'users' are not known a Framework Travel Plan (FTP) is produced which sets out the above in an outline format which will be used to devise subsequent individual plans for each element of the development. This type of Plan is primarily used for large scale developments which could have a significant impact on travel behaviours once occupied.

An FTP represents the first stage in sustainable travel planning. Whilst it has a format similar to a site-specific plan, this FTP will consider the strategic objectives and targets, propose site wide measures and set out monitoring proposals and strategy, which in turn will be used to inform the individual plans.

9.2 Benefits of a Travel Plan

The UK and Welsh Government recognise Travel Plans as an important tool in reducing the number of single occupancy car trips, made to and from a business, organisation, or facility, in favour of more sustainable modes of transport, such as public transport, cycling or walking.

Figure 14 provides examples of some of the benefits of implementing a Travel Plan to different groups.

Visitors

- Health improvements from increased cycling and walking.
- Ability to carry out work whilst travelling on public transport for business travel (where appropriate).
- Time savings due to shorter journey times which enables more time for increasing work productivity, leisure and family.
- Health and lifestyle improvements from increased cycling and walking.

Machynys Hotel Employees

- Healthier workforce and reduced absenteeism, resulting in a more productive workforce.
- Opportunities for staff networking, as car sharing enables staff to socialise as well as discuss work-related issues.
- Meeting an organisation's environmental standards.
- Improved image: environmentally and socially aware for employees.

Wider Community

- Reduced congestion on the local highway network surrounding the site.
- Improved air quality surrounding the site.
- Sets an example to the wider community.

Figure 14: Benefits of a Travel Plan

The overall objective of the TP will seek to achieve a situation where employees and visitors can make informed travel decisions based on comprehensive information about a range of transport modes.

Those travelling to and from the site can be categorised as either employees (at the site or nearby businesses) or visitors.

All site-occupants will work in conjunction to meet the strategic Travel Plan objectives.

9.3 Measures

In addition to the proposals outlined within Section 4, it will be necessary to implement several Travel Plan measures to ensure employees and visitors to the site are informed about their travel options and are encouraged to travel by sustainable modes.

It is not possible at this stage to fully define which measures are most appropriate for the site, as the measures need to be tailored to the needs and aspirations of

future occupiers. The most appropriate measures will be selected following the initial Travel Plan surveys.

9.4 Site Wide Measures

The site wide measures presented below could be implemented in advance of opening for employees.

9.4.1 Walking

In order to encourage walking, the following measures are recommended:

- Provide maps presenting recommended walking routes to the site from key locations. Maps could include indications of walking distances, times and the potential number of calories that could be burned. This map could be displayed on all central notice boards across all sites and provided to new starters;
- Ensure footways are maintained, well-lit and kept clear. Suitable wayfinding and signposting should also be installed to guide pedestrians;
- Raise awareness of the health benefits of walking through the provision of leaflets and notice boards; and
- Circulation of a bi-annual newsletter to all site employees, which would detail Travel (Plan) information and updates; and
- Introduce awareness campaigns such as walk to work week.

9.4.2 Cycling

Site wide initiatives which could encourage cycling include:

- Provision of an onsite Cycle Hub for both staff and visitors to the site, offering repairs and new part services, information relevant to the site and potentially a cycle hire scheme;
- Enrolment on the Government's Cycle to Work Scheme³ using the salary sacrifice process which enables employees to purchase cycles and cycle equipment as a tax-free benefit;
- Free bike loans for up to one month for staff from the Cycle Hub. Users of the free bike loan would pay a deposit and be able to try commuting to work with reduced hassle and no commitment to buy until they know if it will suit them;
- A bike/e-bike share scheme could be introduced at the site with potential docking station also located at Llanelli Railway Station; and
- Introduce awareness of cycling for transport through campaigns such as cycle to work week.

3

https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/845725/cycle-to-work-guidance.pdf

9.4.3 Public Transport

To maximise the use of public transport, employees should be aware of the local public transport network and the benefits of using it. The following initiatives could be implemented to encourage travel by public transport:

- To improve the accessibility to the site by bus, discussions will be progressed with First Bus to investigate opportunities to improve local bus services;
- Displaying a map of the local bus network, stops, journey durations and frequency of services in central notice boards and within individual buildings to increase awareness of public transport for travel to the site;
- Highlight the location of Llanelli railway station and areas which are accessible by rail from the station, alongside walking and cycle travel times to/from the site in order to encourage travel by rail and bike;
- Potential scope to introduce a hotel shuttle to and from the train station for visitors;
- Offer an interest-free season ticket loan scheme for staff to purchase season tickets for public transport; and
- Include public transport information on the staff intranet and publicise national public transport guidance services such as Traveline Cymru.

9.4.4 Cars

To encourage more sustainable use of cars, several measures can be pursued for the site:

- Provision of electric vehicle charging facilities;
- Electric or hybrid pool cars could be provided so that staff who need to travel for work purposes during the day are not required to drive to work;
- Establish a Machynys Hotel car share database to enable staff who live close to one another to share transport (subject to shift times);
- Publicising car sharing websites such as ShareCymru.com or Liftshare.com where users can match up with local drivers or passengers in the area undertaking similar journeys;
- Advertising the cost savings of car sharing on notice boards in addition to the positive environmental impacts in order to raise awareness of the benefits;
- Priority parking for car sharers;
- Potential scope to introduce a hotel shuttle to and from the train station for visitors; and
- Provide a taxi pick up/drop off area to allow accessibility for group airport transfers for long-haul visitors.

9.4.5 Personalised Travel Planning (PTP)

Personal Travel Planning (PTP) could be offered to all employees within the first year of the site being occupied and ideally as part of their staff induction process. This would ensure that staff are aware of the travel choices available to them from the outset and are made aware of the benefits of active travel modes and public transport as alternatives to the private car.

9.5 Implementation and Management

To be successful, a Travel Plan will need to facilitate an understanding of the travel patterns relating to each site through individual Travel Surveys and co-ordinate individual and overarching transport measures which contribute to increasing sustainable travel of employees. An example of hotel Travel Survey is included in Appendix H. In addition, to maximise the chances of success, it is important to have a clear implementation strategy identifying roles and responsibilities for stakeholders within each site to maintain the momentum of the Travel Plan.

It is important that the Travel Plan is a living document managed by a Travel Plan Co-ordinator (see 8.5.1). Travel patterns will change, and new measures will become available. It is therefore encouraged that the Travel Plan is reviewed on a frequent basis to ensure that the objectives are up to date, and targets are being achieved.

9.5.1 Travel Plan Co-ordinator

Quantitative, realistic and achievable targets will be set for the site, based upon individual Travel Surveys undertaken by the occupiers. As such, a Travel Plan Coordinator (TPC) will be appointed. The TPC should periodically undertake reviews of targets and ensure they reflect the targets set out in relevant planning policy guidance.

The TPC appointed for the site would be responsible for:

- Implementation and day-to-day running of the Travel Plan;
- Establishing a Travel Plan Steering Group to assist in taking initiatives forward;
- Promoting and encouraging the use of travel modes other than the car to all staff;
- Taking ownership of the Travel Plan targets and implementing the necessary measures;
- Maintaining a list of travel plan representatives for individual departments/parts of the site;
- Providing a point of contact for travel information for staff;
- Developing and disseminating appropriate Travel Plan marketing information, and to ensure that all relevant and up to date material is clearly displayed on Travel Plan notice boards around the site they are responsible for;
- Arranging for travel surveys to be undertaken when necessary;

- Updating the key milestones, deliverables and the programme outlined in the Travel Plan Action Plan;
- Periodically reviewing the Travel Plan and updating the document as necessary; and
- Organising meetings of the related working groups.

9.5.2 Travel Plan Steering Group

A Travel Plan Steering Group will be formed to coordinate the ongoing review and development of site wide targets towards the overarching goal of increasing sustainable travel to the site. The steering group will likely be formed of the site TPC, senior hotel management and a representative for CCC. The group would work to identify and agree appropriate measures in response to monitor and achieve agreed Travel Plan targets. The Steering Group would be responsible for overall delivery of the Travel Plan, setting targets and agreeing any appropriate mitigation measures.

9.6 Targets, Monitoring and Review

9.6.1 Targets

To meet the overarching aim of maximising sustainable travel to and from the hotel development, a set of outline targets have been developed. These targets are derived from modal split data collected as part of the 2011 Census.

Going forward, additional site-specific targets will be developed. These site-specific targets will be informed by initial travel surveys. It should be recognised that for the targets to be effective in reducing unsustainable travel, they need to be 'SMART' as set out in Figure 15 below.

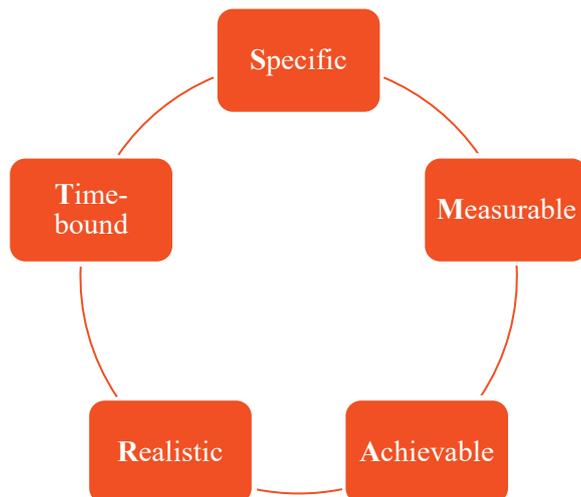

Figure 15: SMART Targets

Existing Travel Patterns

The existing mode share for those travelling to the area can be estimated based on 2011 Census Data journey to work, which is presented in Table 14. Whilst the census data gives an indication of current mode share for journeys to work in the area the intention is that the hotel site achieves a better mode share. Mode share targets will be set following initial travel surveys of employees, residents and visitors. It is proposed that future staggered targets of increasing sustainable travel mode share over time are set targeting a reduction of trips made by single car occupancy journeys.

Considering the existing sustainable transport infrastructure in the vicinity of the site, in particular active travel improvements as well as the Travel Plan measures set out within this document, there should be potential to reduce the proportion of single occupancy car trips.

Baseline Targets

It is important to set realistic targets to measure the success of travel plans. Developing modal share targets for employees ensures that the travel plan is monitored and reviewed and there is a benchmark on which to judge its success. At this stage, only outline targets have been set for the development overall. Comprehensive targets will be set once the first travel surveys have been completed and analysed as a greater understanding of the travel behaviour of the occupants is obtained. This also give final users and TPCs ownership of the targets set.

A target of a reduction of 12% over five years in the number of trips made to and from the site by private car is proposed for the site. This is considered achievable as a result of the following interventions:

- No increase has been made for car passenger journeys since in the 2011 census car-share mode share was 16%, which is already considered to be a significant proportion, when compared against the national average of around 4%;
- An increase of 3% in the proportion of journeys made by public transport (combined bus and rail) through raising awareness of local bus services and of Ebbw Vale Town station as a potential option, which is an approximate five-kilometre cycle away. This could be increased in future depending on whether a staff shuttle bus is implemented;
- A 7% increase in the number trips made by cycle reflecting the potential to provide bike loans and awareness campaigns such a cycle/walk to work week; and
- A 2% increase in walking trips reflecting as a result of proposed good quality links around the site and awareness campaigns such a cycle/walk to work week.

Table 14 shows the targets for other modes.

Table 14: Target Modal Split per Travel Plan Year

Mode	Travel Plan Year
------	------------------

	2011 Census Mode Split	1	2	3	4	5	Target Modal Split
Car driver	84	82	80	78	76	74	72
Car passenger	6	6	6	6	6	6	6
Public transport (Bus/coach/train)	2	3	4	5	6	7	8
Cycling	2%	2%	3%	5%	6%	7%	8%
Walking	2	3	3	4	4	5	5
Motorcycle	5	6	6	7	7	8	8
Taxi	1	1	1	1	1	1	1
Total	100%	100%	100%	100%	100%	100%	100%

9.6.2 Monitoring

An important part of any Travel Plan document is monitoring and review. It is essential that a Travel Plan document is not a one-off event but evolves over time. Regular monitoring and review led by the TPC will help to gauge progress towards targets and objectives and evidence proposals made to the Travel Plan Steering Group in order to improve performance against targets. It is proposed that the Travel Plan is reviewed at least annually.

Monitoring should include:

- Travel patterns (via a travel survey) - comprehensive travel surveys will be undertaken with a commitment to review the Travel Plan targets at the conclusion of each monitoring phase. This review will identify elements of the Plan that are not working as well as others, and inform changes in the measures;
- Full site audit – undertaken by the Travel Plan Steering Group, the audit will identify any barriers that obstruct walking, cycling and using public transport and make recommendations for improvements; and
- Parking counts (all vehicles including bicycles and motorcycles) to check for the balance of supply and demand.

Following monitoring the findings should be set out in a monitoring report. The report will summarise the monitoring data collected, performance against targets, report on progress of measures that have been implemented and suggest any changes to existing measures or new measures required.

The monitoring report will be discussed at the Travel Plan Steering Group with required changes to measures and targets agreed.

10 Conclusion

The proposed Machynys Hotel development consists of 140 beds to the south of the town centre and adjacent to the strategic B4304 Coastal Road. In addition to the well-established highway routes, the site is located close to a combined footway/cycleway which connects to the National Cycle Network. The wider planned network for Llanelli will establish several useful routes for utility and leisure journeys.

The concept masterplan for the Llanelli Wellness and Life Science Village (LWLV) proposal is designed to ‘knit’ together the surrounding developments to create a sustainable community of mixed land-uses. This has been used as the basis to inform this transport assessment which has included a number of committed developments forecasted trips.

The hotel will be developed as a separate site but would retain potential to provide a vehicular link to the adjacent residential development to the west. The access road from the residential development could provide access to the proposed hotel development adjacent. The access is a proposed all-movement priority T-junction with a ghost island. Another potential access would be via a separate access from the Machynys Roundabout/Nicklaus Avenue that is lightly trafficked from the existing golf course. Either access or a combination of the two access will be further assessed within the reserved matters process.

The development is forecast to generate 55 two-way vehicle trips in the AM peak hour and 60 two-way vehicle trips in the PM peak hour. The development is therefore not considered to have a significant impact on the local highway network.

In agreement with CCC, five junctions have been assessed using Junctions 9 for roundabouts (ARCADY module) and priority junctions (PICADY module). Junction assessment shows that the proposed hotel would have relatively little impact on the surrounding road network. As a result, no mitigation is proposed.

Several proposals from the neighbouring developments are expected to have a positive impact on the hotel site such as the pedestrian crossings proposed in the vicinity of the LWLV site which will improve connectivity and create a safe environment for all road users, and a bus strategy that is being developed for the site in consultation with CCC and First Bus as the local service operator. In addition to potential service improvements, a bus stop is proposed within the LWLV site directly north of the Delta Lakes roundabout as part of the LWLV proposals.

A framework Travel Plan has also been prepared in support of the hotel development proposal and is within this report. It includes a number of physical and behavioural measures intended to encourage travel by sustainable modes and reduce the number of vehicle trips associated with the proposed Machynys Hotel.

It is concluded that the site is suitable for the type and scale of development proposed and that there are no transportation reasons why the site should not be developed, providing that the following transport measures are implemented:

- (i) Cycle parking provision for a minimum of 28 cycle parking spaces to encourage use of sustainable modes;
- (ii) Provision of an uncontrolled crossing with central refuge island to enable access across to the footway/cycleway to the north of the B4304;
- (iii) Provision of footways throughout the proposed development site on either side of the carriageway apart from those areas of the development which will adopt 'pedestrian prioritised street' principles;
- (iv) Provision of appropriate levels of car parking, sufficient for a development of this size whilst also ensuring that sustainable travel modes are prioritised; and
- (v) A new all movement vehicular access junction off the B4304 Coastal Road.

Hi Aneesah

Thanks for your email.

Please find below the applicable parking standards:

In terms of active travel, Samara and Tom's email addresses are as follows:

Thomas J Evans TJEvans@carmarthenshire.gov.uk

Samara Hicks SHicks@carmarthenshire.gov.uk

I can also confirm that we are content with your proposed Trip Gen and Assessment Scope (including committed developments list). Given that you are pressed for time on this assessment (and depending on the results of the assessments that you present in the TA), should any additional analysis need to be presented we can request this during the determination of application period.

Kind Regards

Geraint Morgan *MTCP*

Hi All,

Hope you had a good weekend!

Do you have any comments on the below approach taken to assess the traffic impact from Machynys Hotel?

Kind Regards,
Aneesah

Subject: Machynys Hotel Scoping

Hi Both,

Thank you for the phone call Monday 07th. As discussed we are currently undertaking an assessment for an outline planning application for a 140 bed hotel in the Machynys area. This is an update to the previous Watermans TA application approved in 2010. Please could you provide the CSS 2014 if available, the Llanelli Active Travel Masterplan and contact details for your colleagues Samara and Tom who you mentioned could help to inform us on the proposed improvements in the area.

The below sets out the scope which we would like to agree with you on how to assess the predicted flows generated from the hotel and assessment of the development. Please could you review and get back to us as soon as you can as we would like to submit before Christmas.

Trip Gen and Assessment scope:

Vehicle Access:

The proposed hotel access will remain as the previous 2010 application using;

- the proposed Machynys Central residential entrance off the B4304 for staff and service vehicles, and
- a visitor access off the road leading to the golf course

Junction assessments, road safety audits, Swept Path Analysis and design detail will be carried out in a more detailed applications upon approval of this outline application.

Forecasted Trips:

Below is an updated forecasted trip rate generated from the proposed hotel from the 2010 application, using TRICS. The following traffic flows generated for the 140 bed hotel is: (updated TRICS report attached). For robustness, we will continue to use the Watermans trip rates as these are higher to represent a 'worst case'.

Due to Covid-19 and timescales for submitting the outline planning application a survey would not be appropriate at this time, and it is assumed that the traffic pattern is likely to turn back to pre-covid trends in the future. The uptake in active travel and public transport may increase with the active travel masterplan and possible new bus services to the developed area but for a robust assessment, we propose to use the 2017 surveyed data which was collected and included as part of the Llanelli Wellness TA application. We will apply an uplift factor from TEMPro to get a 2021 base year. Our assessment will look at the 2021 base year and the development + 5 years (2026) and only assess the AM (0800-0900) and PM peak (1630-1730) hours.

Distribution assumption of hotel trips:

- Survey data from the updated TRICS rates was used to estimate the number of employees working a standard 9-5 hour shift or similar. Therefore it can be assumed that those employees would travel during both the AM (0800-0900) and PM (1630-1730) peak hours, and therefore will be travelling via the Machynys Central Residential proposed access, with an assumed car occupancy of 1.5.
- Visitor Distribution to the hotel is based on the 2017 traffic survey
- Employee Distribution to the hotel is based on a 70/30 split, with 70% travelling north along Trostre Road, and 30% towards Sandy Roundabout on all outbound journeys as discussed on the phone call.
- All distribution leaving the hotel site is based on a 70/30 split, with 70% travelling north along Trostre Road, and 30% towards Sandy Roundabout on all outbound journeys as discussed on the phone call;
- Based on the current proposed access to the hotel all deliveries will enter via the Machynys Central Residential proposed access, and assumed outside of the AM and PM peak hours, and therefore have not been included in the impact assessment and will be carried out in a more

detailed applications upon approval of this outline application.

Assessment:

We have included a percentage impact assessment on the following junctions surveyed from Llanelli Wellness and

1. Sandy Roundabout (A484/Coastal Link Road/Sandpiper Road)
2. Seaside Roundabout (Coastal Link Road/Queen Victoria Way)
3. Lledi Roundabout (Coastal Link Road/Marine Street/North Dock)
4. Copperhouse Roundabout (Coastal Link Road/Copperhouse Road)
5. Delta Lakes Roundabout (Coastal Link Road/Delta Lakes/Access Road)
6. Machynys Roundabout (Coastal Link Road/The Avenue/Nicklaus Avenue)
7. The Avenue/Northumberland Road Priority Junction
8. The Avenue/Embankment Road/North Dock Road Priority Junction
9. B4304 Station Road/Glanmor Road/Marsh Street Mini-Roundabout
10. B4304 Station Road/Queen Victoria/Murray Street Signalised Junction
11. Morfa Roundabout (Coastal Link Road/Lower Trostre Road)
12. Trostre Road/Trostre Parc Roundabout
13. Trostre Roundabout (A484/Trostre Road/A4138)
14. A4138/Pemberton Access Signalised Junction
15. A4138/ Llandafen Road/Glyncoed Road Signalised Crossroads

As a result of the PIA (please see attached), using 2021 with all committed developments as the base flow, we propose that junction modelling is undertaken for Machynys Roundabout, the new potential ghost island priority serving the proposed residential site, and Morfa roundabout will be undertaken.

Like Llanelli Wellness, the other committed developments included in the assessment are:

- Machynys East residential;
- Machynys Central residential;
- Seaside Primary School;
- Stradey Park Residential development; and
- Llanelli Wellness.

Can you please confirm that these are still applicable, and if there any further sites that warrant inclusion.

Our assessment will tie in with the Llanelli Wellness application which proposed physical mitigation on roundabouts that could potentially be over capacity (including sandy roundabout). The assessment included the hotel as a 125 bed development. And this 140 bed hotel assessment only proposes an additional 7 and 8 vehicles on the network in the AM and PM peak respectively due to the increase in hotel rooms.

We look forward to your response, do not hesitate to call on the below number to discuss any queries.

Thanks,

[Aneesah Irshad](#)

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle. Junction LOS and Junction Delay are demand-weighted averages.

File summary

File Description

Title	Coastal Link Road_Copperhouse Roundabout
Location	Machynys
Site number	4
Date	16/12/2020
Version	1
Status	For Planning
Identifier	Machynys Hotel
Client	Carmarthen County Council
Jobnumber	278688
Enumerator	GLOBAL\Aneesah Irshad
Description	

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	kph	PCU	PCU	perHour	s	-Min	perMin

Analysis Options

Vehicle length (m)	Calculate Queue Percentiles	Calculate detailed queueing delay	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
5.75	✓			0.85	36.00	20.00

Demand Set Summary

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)	Run automatically

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle. Junction LOS and Junction Delay are demand-weighted averages.

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle. Junction LOS and Junction Delay are demand-weighted averages.

File summary

File Description

Title	Coastal Link Road_The Avenue_Machynys Roundabout
Location	Machynys
Site number	1
Date	16/12/2020
Version	1
Status	For Planning
Identifier	Machynys Hotel
Client	Carmarthen County Council
Jobnumber	278888
Enumerator	GLOBAL\Aneesah Irshad
Description	

Units

Arm	Name	Description
1	The Avenue	
2	Coastal Link E	
3	Nicklaus Avenue	
4	Coastal Link W	

Roundabout Geometry

Arm	V - Approach road half-width (m)	E - Entry width (m)	I' - Effective flare length (m)	R - Entry radius (m)	D - Inscribed circle diameter (m)	PHI - Conflict (entry) angle (deg)	Exit only
1 - The Avenue	3.91	7.51	18.1	47.5	59.3	13.8	
2 - Coastal Link E	3.71	7.71	16.5	48.7	59.0	15.3	
3 - Nicklaus Avenue	3.72	8.11	22.9	42.9	59.1	15.6	
4 - Coastal Link W	3.73	7.06	23.6	43.4	59.0	17.3	

Slope / Intercept / Capacity

Roundabout Slope and Intercept used in model

Arm	Final slope	Final intercept (PCU/hr)
1 - The Avenue	0.637	2007
2 - Coastal Link E	0.627	1950
3 - Nicklaus Avenue	0.652	2100
4 - Coastal Link W	0.626	1954

The slope and intercept shown above include any corrections and adjustments.

Traffic Demand

Demand Set Details

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle. Junction LOS and Junction Delay are demand-weighted averages.

File summary

File Description

Title	Coastal Link Road/Lower Trostre Road
Location	Machynys
Site number	2
Date	16/12/2020
Version	1
Status	For Planning
Identifier	Machynys Hotel
Client	Carmarthen County Council
Jobnumber	278888
Enumerator	GLOBAL\Aneesah Irshad
Description	

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	kph	PCU	PCU	perHour	s	-Min	perMin

Analysis Options

Vehicle length (m)	Calculate Queue Percentiles	Calculate detailed queueing delay	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
5.75				0.85	36.00	20.00

Stream C-B	0.0	7.85	0.02	A			0.0	8.82	0.04	A		

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle. Junction LOS and Junction Delay are demand-weighted averages.

File summary

File Description

Title	Proposed Machynys Central Residential Access
Location	Machynys
Site number	3
Date	14/12/2020
Version	1
Status	For Planning
Identifier	Machynys Hotel
Client	Carmarthen County Council Carmarthen County Council
Jobnumber	278688
Enumerator	GLOBAL\Aneesah Irshad
Description	

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	kph	PCU	PCU	perHour	s	-Min	perMin

Analysis Options

Calculate Queue Percentiles	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
		0.85	36.00	20.00

Demand Set Summary

Data Errors and Warnings

No errors or warnings

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
3	Proposed Access	T-Junction	Two-way		0.14	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	B4304 East		Major
B	Proposed Access		Minor
C	B4304 West		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Width for right turn (m)	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - B4304 West	6.00		✓	3.00	150.0		-

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B - Proposed Access	One lane	3.00	120	120

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Junction	Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
3	B-A	578	0.105	0.268	0.167	0.380
3	B-C	699	0.107	0.271	-	-
3	C-B	718	0.278	0.278	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand

Travel Survey Example

Crowne Plaza / Holiday Inn 2019 Staff Travel Survey

Please answer the following questions by ticking the box that best fits your answer, or if your answer is 'other', write your answer in the space provided.

Which of the following best describes your normal working pattern?	<input type="checkbox"/> Core Working Hours (Monday to Friday) <input type="checkbox"/> Shift Work
Are you a permanent or part time staff member?	<input type="checkbox"/> Permanent Staff <input type="checkbox"/> Part time Staff
Which days of the week, on average, do you work? (Tick all that apply)	<input type="checkbox"/> Monday-Friday <input type="checkbox"/> Monday <input type="checkbox"/> Tuesday <input type="checkbox"/> Wednesday <input type="checkbox"/> Thursday <input type="checkbox"/> Friday <input type="checkbox"/> Saturday <input type="checkbox"/> Sunday <input type="checkbox"/> Varies each week
Which building is your principal place of work?	<input type="checkbox"/> Crowne Plaza <input type="checkbox"/> Holiday Inn <input type="checkbox"/> Split
From what area/town do you travel to work each day?	<hr style="width: 80%; margin: 0 auto;"/>

How do you usually travel TO work?
Tick one box only, for the longest part,
by distance, of your usual journey to
work.

- Bicycle (pedal powered)
 - Bus, Minibus or Coach
 - Shuttle Bus
 - Driving a Car (you drive and require parking)
 - Motorcycle or Scooter
 - On Foot
 - Passenger in a car with driver going to different destination
 - Passenger in a car with driver going to the same destination
 - Train or DART
 - Luas
 - Taxi
 - Other (please specify
-

What is your main reason for choosing that mode? (select up to three)

- Traffic Congestion
- Availability of car parking
- Lack of public transport (time/routes)
- Hours of work
- Disability
- Cheapest
- Comfort
- Environmentally-friendly
- Lack of alternative
- Less stressful
- Other commitments (e.g. school run, creche etc)
- Quickest
- Reliability
- Other (please specify)

	<hr/>
<p>If you usually use more than one mode of transport as part of your journey, how do you usually travel for the shorter part, by distance? Tick only one box. (e.g. bike from train station, dropped to a Luas stop)</p>	<ul style="list-style-type: none"> <input type="checkbox"/> Bicycle (pedal powered) <input type="checkbox"/> Bus, Minibus or Coach <input type="checkbox"/> Shuttle Bus <input type="checkbox"/> Driving a Car (you drive and require parking) <input type="checkbox"/> Motorcycle or Scooter <input type="checkbox"/> On Foot <input type="checkbox"/> Passenger in a car with driver going to different destination <input type="checkbox"/> Passenger in a car with driver going to the same destination <input type="checkbox"/> Train or DART <input type="checkbox"/> Luas <input type="checkbox"/> Taxi <input type="checkbox"/> N/A <input type="checkbox"/> Other (please specify) <hr/>
<p>What is your most regular arrival time to work?</p>	<ul style="list-style-type: none"> <input type="checkbox"/> 6:00 – 9:00 <input type="checkbox"/> 9:00 – 12:00 <input type="checkbox"/> 12:00 – 15:00 <input type="checkbox"/> 15:00 – 18:00 <input type="checkbox"/> After 18:00 <input type="checkbox"/> Shift Work – Arrival Time varies <input type="checkbox"/> Other (please specify) <hr/>

What is your most regular departure time from work?

- Before 16:00
 - 16:00 - 17:00
 - 17:00 - 18:00
 - 18:00 - 19:00
 - 19:00 – 20:00
 - 20:00 - 21:00
 - 21:00 - 22:00
 - After 22:00
 - Shift Work - Departure Time Varies
 - Other (please specify)
-

How long does it take you to get to work (door to door)?

- Less than 15 minutes
- 15 - 30 mins
- 30 - 45 mins
- 45 – 60 mins
- 60 – 90 mins
- More than 90 mins

How far do you travel to work (door to door)?

- Less than 3km
- Between 3 and 5km
- Between 5 and 10 km
- Between 10 and 30km
- Between 30 and 60 km
- More than 60km

<p>Do any of the following factors affect your mode choice to and from work? Please choose up to three reasons</p>	<ul style="list-style-type: none"> <input type="checkbox"/> Traffic Congestion <input type="checkbox"/> Availability of car parking <input type="checkbox"/> Lack of public transport (time/routes) <input type="checkbox"/> Hours of work <input type="checkbox"/> Disability <input type="checkbox"/> Cost <input type="checkbox"/> Comfort <input type="checkbox"/> Environmentally-friendly <input type="checkbox"/> Lack of alternative <input type="checkbox"/> Less stressful <input type="checkbox"/> Other commitments (e.g. school run, creche etc) <input type="checkbox"/> Quickest <input type="checkbox"/> Reliability <input type="checkbox"/> Other (please specify) <hr style="width: 20%; margin-left: 0;"/>
